# Independent Auditors' Report

The Board of Water and Power Commissioners
Department of Water and Power
City of Los Angeles:

We have audited the accompanying balance sheets of City of Los Angeles' Department of Water and Power's Power Revenue Fund (Power System), an enterprise fund of the City of Los Angeles, California, as of June 30, 2010 and 2009, and the related statements of revenues, expenses, and changes in fund net assets and cash flows for the years then ended. These financial statements are the responsibility of the Los Angeles Department of Water and Power's (the Department) management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Power System's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in note 1, the financial statements of the Power System are intended to present the financial position, and the changes in financial position and, cash flows of only that portion of the business-type activities and each major fund of the City of Los Angeles, California that is attributable to the transactions of the Power System. They do not purport to, and do not, present fairly the financial position of the City of Los Angeles, California as of June 30, 2010 and 2009, the changes in its financial position or, where applicable, its cash flows for the years then ended in conformity with U.S. generally accepted accounting principles.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Power System as of June 30, 2010 and 2009, and the changes in its financial position and its cash flows for the years then ended in conformity with U.S. generally accepted accounting principles.

As discussed in notes 2 and 9 in the notes to the financial statements, the Power System adopted the provisions of Governmental Accounting Standards Board (GASB) Statement No. 53, *Accounting and Reporting for Derivative Instruments*, effective July 1, 2008.

In accordance with *Government Auditing Standards*, we have also issued our report dated December 20, 2010 on our consideration of the Power System's internal control and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of

that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* and should be considered in assessing the results of our audit.

The management's discussion and analysis included on pages 3 through 13 and the schedules of funding progress for the pension plan and postemployment healthcare plan on page 68 are not a required part of the basic financial statements but are supplementary information required by U.S. generally accepted accounting principles. We have applied certain limited procedures, which consisted principally of inquiries of management regarding the methods of measurement and presentation of the required supplementary information. However, we did not audit the information and express no opinion on it.

KPMG LLP

December 20, 2010

The following discussion and analysis of the financial performance of the City of Los Angeles' (the City) Department of Water and Power's (the Department) Power Revenue Fund (the Power System) provides an overview of the financial activities for the fiscal years ended June 30, 2010 and 2009. Descriptions and other details pertaining to the Power System are included in the notes to the financial statements. This discussion and analysis should be read in conjunction with the Power System's financial statements, which begin on page 14.

## Using This Financial Report

This annual financial report consists of the Power System's financial statements and required supplementary information and reflects the self-supporting activities of the Power System that are funded primarily through the sale of energy, transmission, and distribution services to the public it serves.

## Balance Sheets, Statements of Revenues, Expenses, and Changes in Fund Net Assets, and Statements of Cash Flows

The financial statements provide an indication of the Power System's financial health. The balance sheets include all of the Power System's assets and liabilities, using the accrual basis of accounting, as well as an indication about which assets can be utilized for general purposes, and which net assets are restricted as a result of bond covenants and other commitments. The statements of revenues, expenses, and changes in fund net assets report all of the revenues and expenses during the time periods indicated. The statements of cash flows report the cash provided by and used in operating activities, as well as other cash sources and uses, such as investment income and cash payments for bond principal and capital additions and betterments.

The following table summarizes the financial condition and changes in fund net assets of the Power System as of and for the fiscal years ended June 30, 2010, 2009, and 2008:

**Table 1 – Condensed Schedule of Assets, Liabilities, and Fund Net Assets**

(Amounts in millions)

| | As of June 30 | | |
|---|---|---|---|
| **Assets** | **2010** | **2009** | **2008** |
| Utility plant, net | $ 6,979 | 6,617 | 6,212 |
| Restricted investments | 683 | 722 | 723 |
| Other noncurrent assets | 1,753 | 1,882 | 1,843 |
| Current assets | 2,234 | 1,770 | 2,007 |
| Deferred outflows on derivative instruments | 84 | 113 | — |
| | $ 11,733 | 11,104 | 10,785 |
| **Liabilities and Fund Net Assets** | | | |
| Long-term debt, net of current portion | $ 5,711 | 5,242 | 4,802 |
| Other long-term liabilities | 449 | 654 | 567 |
| Current liabilities | 694 | 651 | 1,009 |
| | 6,854 | 6,547 | 6,378 |

| Ending balance of fund net assets | $ 4,879 | 4,557 | 4,407 |

**Assets**

***Utility Plant***

During fiscal years 2010 and 2009, the Power System placed in service $848 million and $974 million of additions, respectively, including transfers from construction work in progress to utility plant in service. Of the $848 million capitalized in 2010, $545 million, or 64%, is mostly related to distribution plant assets including poles, towers, fixtures, replacement of transformers, underground and overhead conductors, conduit, new meters,

services, and station equipment. The increase is attributable to our Power Reliability Program (PRP) to improve distribution system reliability. In addition, $165 million or 19% is primarily related to generation plant assets as a result of Department's commitment to green power including purchase of land and land rights, acquisition and installation of prime movers, generators, and management costs. Of the $974 million placed in service in 2009, $394 million, or 40%, is mostly related to distribution plant assets including poles, towers, fixtures, replacement of transformers, underground conductors, and conduit. The increase is attributable to our PRP to improve distribution system reliability. In addition, $423 million or 43% is primarily related to generation plant assets including the cost to construct the Pine Tree Wind Project and capital improvements to various generating stations.

Construction work in progress decreased by $178 million in fiscal year 2010 and decreased by $280 million in fiscal year 2009. The 2010 decreases were mostly attributable to the capitalization of Distribution System assets, $81 million related to relocation of various overhead and underground facilities and devices, and replacement of transformer banks. Also, Generation had asset additions and betterments to its in-basin, hydraulic, and coal fired generating stations for $44 million. In addition, General Plant assets and other miscellaneous improvements amounted to roughly $45 million with the substation automation being the largest portion of the capital expenditures, $28 million. For Transmission, aging cables have been replaced for 32 miles with total cost of $8 million. The 2009 decreases were mostly attributable to the capitalization of the Pine Tree Wind Project, Towers and Overhead Transmission, Underground Transmission, and Distribution Facilities.

Additional information regarding the Power System's utility plant assets can be found in note 4 to the accompanying financial statements.

The Department's strategy is to have generating utility plant assets that can produce energy from a variety of fuel types. This is referred to as a hedged power supply. This is important in that if the costs related to a particular fuel type rise substantially in a short period of time, the Department can utilize its mix of generation assets to meet customer demand and to minimize increases in fuel expense. Since the Board of Water and Power Commissioners (the Board) approved and adopted the Integrated Resource Plan in 2007, the Department is seeking public input and is currently holding public workshops throughout the City in order to finalize the 2010 Integrated Resource Plan (IRP). The Department has released a draft of the IRP, which addresses the Department's resource needs up through 2030. The IRP is an energy resource planning document that provides a framework for assuring that the future energy needs of customers are reliably met in a cost-effective manner, and are consistent with the City's commitment to environmental leadership. Through June 30, 2010, the Department has incurred $1.4 billion related to such upgrades.

The tables that follow summarize the generating resources available to the Department as of June 30, 2010. These resources include those owned by the Department (either solely or jointly with other utilities) as well as resources available through long-term purchase agreements. Generating station capacity is measured in megawatts (MWs).

**Table 3 – Department-Owned Generation Facilities**

| Type of fuel | Notional Amount (Number of facilities) | | Number of units | | Net maximum capability (MWs) | | Net dependable capability (MWs) |
|---|---|---|---|---|---|---|---|
| Natural gas | 4 | (1) | 22 | | 3,399 | | 3,321 |
| Large hydro | 1 | | 7 | (2) | 1,247 | | 1,175 |
| Renewables | 35 | | 180 | (3) | 362 | (4) | 166 |
| Subtotal | 40 | | 209 | | 5,008 | | 4,662 |
| CDWR | — | | — | | (120) | (5) | (76) |
| Total | 40 | | 209 | | 4,888 | | 4,586 |

(1) Consists of the following generating stations: Harbor Station, Haynes Station, Scattergood Station, and Valley Station.

(2) The Castaic Plant currently has six (1,075 MWs) out of seven units available due to ongoing modernization work scheduled to be completed by 2014.

(3) The Department-owned renewable resources in-service include the Los Angeles Aqueduct, Owens Valley, and Owens Gorge small hydro units that qualify under the Department's renewable resource definition. Also included are microturbine units at the Lopez Canyon Landfill and Department built photovoltaic solar installations, and the Pine Tree Wind Project. This number does not include two of the Scattergood gas-fueled units that partially burn digester gas in which the output related to the digester gas also qualifies under the Department's renewable resource definition.

(4) Includes 16 MWs of renewable energy generated at the Scattergood Station by burning digester gas from the Hyperion Treatment Plant.

(5) Energy payable to the California Department of Water Resources (CDWR) for energy generated at the Castaic Plant. This amount varies weekly up to maximum of 120 MWs.

(Continued)

**Table 4 – Jointly Owned and Contracted Facilities**

| Type | Number of facilities | | Net maximum capability (MWs) | | Net dependable capability (MWs) |
|---|---|---|---|---|---|
| Large hydro | 1 | | 491 | (1) | 446 |
| Nuclear | 1 | | 387 | (2) | 381 |
| Coal | 3 | | 1,679 | (3) | 1,524 |
| Renewables/DG | 2,440 | (4) | 811 | | 262 |
| Total | 2,445 | | 3,368 | | 2,613 |

(1) The Department's Hoover Plant contract entitlement is 25.16% of the Hoover total contingent capacity of 1,951 MWs. Current reduced lake level has reduced available capacity to about 446 MWs annual average.

(2) The Department's Palo Verde Station (PVNGS) entitlement is 9.66% of the maximum net plant capability of 4,008 MWs.

(3) The Department's current Intermountain Station (IPP) entitlement is 66.79% of the maximum net plant capability of 1,800 MWs. A portion of the IPP entitlement is subject to variable recall. The Department's Navajo Station entitlement is 21.20% of the maximum net plant capability of 2,250 MWs. The Mohave Station generating units were removed from service at the end of 2005.

(4) The Department's contracted renewable resources in-service include landfill gas units at various landfills in the Los Angeles area, hydro units locally and in British Columbia, Canada, wind farms in Wyoming and Oregon, customer solar photovoltaic installations locally, and customer distributed generation (DG) units located in Los Angeles also provide energy resources.

**Liabilities and Fund Net Assets**

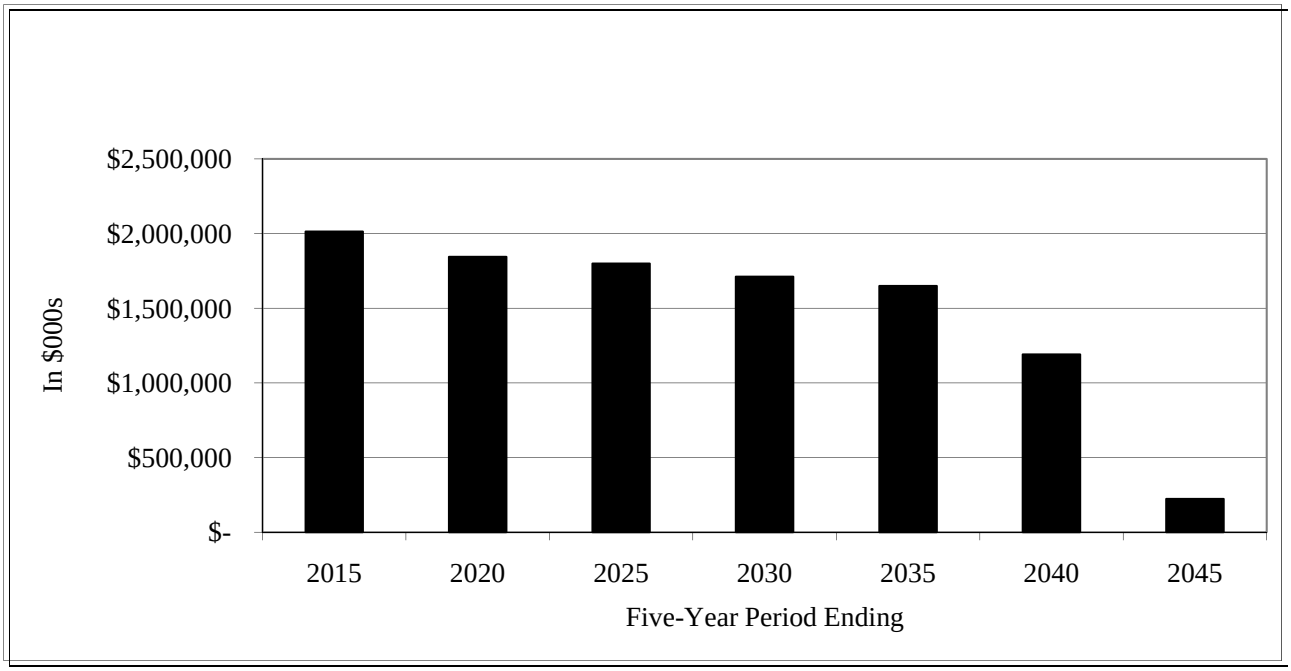
***Long-Term Debt***

As of June 30, 2010, the Power System's total outstanding long-term debt balance was approximately $5.92 billion. The increase of $489 million over the prior year's balance resulted from the sale of $668 million of the Power System revenue bonds less the refunding of $77 million revenue bonds and scheduled maturities of $102 million.

As of June 30, 2009, the Power System's total outstanding long-term debt balance was approximately $5.46 billion. The increase of $480 million from the June 30, 2008 balance resulted from the sale of $845 million of the Power System revenue bonds less the refunding of $306 million revenue bonds and scheduled maturities of $59 million.

Outstanding principal, plus scheduled interest as of June 30, 2010, is scheduled to mature as shown in the chart below:

**Chart: Debt Service Requirements**



In addition, the Power System had $529 million and $547 million on deposit in trust funds restricted for the use of debt reduction as of June 30, 2010 and 2009, respectively.

In November 2010, Standard & Poor's Rating Services, Moody's Investors Service, and Fitch Ratings affirmed the Power System's bond rating of AA-, Aa3, and AA-, respectively, due to the Power System's broad revenue stream and a competitive power supply portfolio that has historically provided competitive retail electricity rates and evident strategic focus on positioning the utility to improve system reliability while meeting state mandated greenhouse emission rules and renewable energy standards. Additional information regarding the Power System's long-term debt can be found in note 10 to the financial statements.

## Changes in Fund Net Assets

### *Operating Revenues*

The operating revenues of the Power System are generated from wholesale and retail customers. There are four major customer categories of retail revenue. These categories include residential, commercial, industrial, and other, which includes public street lighting. Table 5 summarizes the percentage contribution of retail revenues from each customer segment in fiscal years 2010 and 2009:

**Table 5 – Revenue and Percentage of Revenue by Customer Class**

(Amounts in thousands)

| | Fiscal year 2010 | | Fiscal year 2009 | |
|---|---|---|---|---|
| | Revenue | Percentage | Revenue | Percentage |
| Type of customer: | | | | |
| Residential | $ 1,014,610 | 33% | $ 887,571 | 33% |
| Commercial | 1,806,323 | 58 | 1,554,721 | 58 |
| Industrial | 256,092 | 8 | 225,958 | 8 |
| Other | 31,814 | 1 | 36,802 | 1 |
| | $ 3,108,839 | 100% | $ 2,705,052 | 100% |

While commercial customers consume the most electricity, residential customers represent the largest customer class. As of June 30, 2010 and 2009, the Power System had approximately 1.4 million customers. As shown in Table 6, 1.3 million, or 87%, of total customers were in the residential customer class.

**Table 6 – Number of Customers and Percentage of Customers by Customer Class**

(Numbers in thousands)

| | Fiscal year 2010 | | Fiscal year 2009 | |
|---|---|---|---|---|
| | Number | Percentage | Number | Percentage |
| Type of customer: | | | | |
| Residential | 1,252 | 87% | 1,258 | 87% |
| Commercial | 180 | 12 | 179 | 12 |
| Industrial | 13 | 1 | 13 | 1 |
| Other | 2 | — | 2 | — |
| | 1,447 | 100% | 1,452 | 100% |

### *Fiscal Year 2010*

Retail revenues increased by $404 million while wholesale revenues increased by $75 million from fiscal year 2009. The increase in retail revenue is due to a series of automatic quarterly energy cost adjustment factor increases and the recognition of $177 million of deferred revenue that was earned. The energy cost adjustment factor increased due to rising fuel and renewable generation cost. Of the $75 million increase in wholesale

(Continued)

revenue, $30 million came from the Cal-PX litigation settlement dating back to the 2000-01 energy crisis era, $13 million came from IPP litigation settlement sales to Utah municipalities and PacifiCorp. During fiscal years 2010 and 2009, the Power System deferred wholesale revenue of $2.2 million and $24.7 million, respectively, to the rate stabilization account.

***Fiscal Year 2009***

Retail revenues increased by $14.1 million while wholesale revenues decreased by $39.5 million from fiscal year 2008. The increase in retail revenue is due to an increase in base rates approved by the City Council in April 2008, offset by a decrease in costs that are recoverable through the energy cost adjustment billing factor. The decrease in wholesale revenue, which is comprised of energy and transmission sales is due to lower energy sales caused by milder weather. During fiscal years 2009 and 2008, the Power System deferred wholesale revenue of $24.7 million and $23.6 million, respectively, to the rate stabilization account.

***Operating Expenses***

Fuel for generation and purchased power are two of the largest expenses that the Power System incurs each fiscal year. Fuel for generation expense includes the cost of fuel that is used to generate energy. The majority of fuel costs include the cost of natural gas, coal, and nuclear fuel.

Purchased power expense includes the cost of buying power on the open market and paying the current portion of the Power System's purchased power contracts. Under these purchase power contracts, the Department has an entitlement to the energy that is produced at various generating stations and an entitlement to the use of various transmission facilities. Most of these contracts require the Department to pay for these services regardless of whether the energy or transmission is used. These types of contracts are referred to as "take-or-pay" contracts.

Depreciation expense is computed using the straight-line method based on service lives for all projects completed after July 1, 1973, and for all office and shop structures, related furniture and equipment, and transportation and construction equipment. Depreciation for facilities completed prior to July 1, 1973 is computed using the 5% sinking fund method based on estimated service lives. The Department uses the composite method of depreciation and, therefore, groups assets into composite groups for purposes of calculating depreciation expense. Estimated service lives range from 5 to 75 years. Amortization expense for computer software is computed using the straight-line method over 5 years.

The table below summarizes the Power System's operating expenses during fiscal years 2010 and 2009:

**Table 7 – Operating Expenses and Percentage of Expense by Type of Expense**

(Amounts in thousands)

| | Fiscal year 2010 | | Fiscal year 2009 | |
|---|---|---|---|---|
| | Expense | Percentage | Expense | Percentage |
| Type of expense: | | | | |
| Fuel for generation | $ 480,707 | 18% | $ 449,612 | 19% |
| Purchased power | 829,177 | 32 | 699,828 | 30 |
| Other operating expenses | 670,093 | 25 | 616,337 | 26 |
| Maintenance | 307,457 | 12 | 277,415 | 12 |
| Depreciation and amortization | 337,866 | 13 | 293,239 | 13 |
| | $ 2,625,300 | 100% | $ 2,336,431 | 100% |

***Fiscal Year 2010***

Fiscal year 2010 operating expenses were $289 million higher as compared to fiscal year 2009. Purchased power expenses were $129 million higher in fiscal year 2010 due to a $60 million increase in renewable generation purchase as several long-term Renewable Portfolio Standard (RPS) purchase agreements came online, and by a $74 million increase in IPP purchased power expense due to increased coal cost and reduced recall sales.

Other operating costs increased by $54 million primarily in hydraulic station expenses, transmission expenses, distribution expenses, and settlements for injuries, and damages. Maintenance expense increased by $30 million as compared to fiscal year 2009 due to maintenance of distribution plant, hydraulic plant, and steam plant. Other increases include depreciation and amortization expense by $44.6 million, and fuel for generation increased by $31 million.

***Fiscal Year 2009***

Fiscal year 2009 operating expenses were $121 million lower as compared to fiscal year 2008. Fuel for generation expenses were $198 million lower in fiscal year 2009 due to the decrease in the price of natural gas.

Other operating costs increased by $25 million primarily in transmission expenses and hydraulic station expenses. Maintenance expense increased by $31 million as compared to fiscal year 2008 due to maintenance of steam plant, transmission plant, and distribution plant. Other increases include depreciation and amortization expense by $12 million, and purchased power increased by $10 million.

**Nonoperating Revenues and Expenses**

***Fiscal Year 2010***

The major nonoperating activities of the Power System for fiscal year 2010 included the transfer of $220 million to the City's General Fund, interest income earned on investments of $106 million, and $212 million in debt expenses.

The transfer to the City is based on 8% of the previous year's operating revenues. Operating revenues for fiscal year 2009 were $2.8 billion, which generated a city transfer of $220 million.

Interest income decreased by $9 million due to less cash available for investing and a decline in the interest rates in fiscal year 2010 as compared to 2009.

The increase in debt expense is due to having interest on the 2009 Series A and B debts that were issued in February 2009 and June 2009, respectively, offset by a slight lower interest rate on variable rate debt. The variable rate bonds' daily and weekly rate range decrease from 0.27% to 0.30% as of June 30, 2009 to 0.14% to 0.29% as of June 30, 2010.

***Fiscal Year 2009***

The major nonoperating activities of the Power System for fiscal year 2009 included the transfer of $223 million to the City's General Fund, interest income earned on investments of $115 million, and $201 million in debt expenses.

The transfer to the City is based on 8% of the previous year's operating revenues. Operating revenues for fiscal year 2008 were $2.8 billion, which generated a city transfer of $223 million.

Interest income decreased by $44 million due to less cash available for investing and a decline in the interest rates in fiscal year 2009 as compared to 2008.

The increase in debt expense is due to having 7 months of interest on the 2008 Series A1 debt that was issued in November 2008 offset by lower interest rates on variable rate debt. The variable rate bonds' daily and weekly rate range decreased from 1.55% to 1.65% as of June 30, 2008 to 0.27% to 0.30% as of June 30, 2009.

***Currently Known Facts, Decisions, or Conditions***

The July 1, 2010 actuarial study for the Water and Power Employees' Retirement, Disability, and Death Benefit Insurance Plan (the Plan) noted the market value of the Plan's assets was approximately $6.266 billion and the unfunded actuarial accrued liability was approximately $1.649 billion. The Plan had unrecognized investment losses of $1.041 billion as of June 30, 2010. The Plan employs a 5-year smoothing technique to value assets in order to reduce the volatility in contribution rates. The impact of this will result in "smoothed" assets that are lower or higher than the market value of the assets depending upon whether the remaining amount to be smoothed is either a net gain or a net loss. If the unrecognized investments losses were recognized immediately, required contributions to the Plan would increase from approximately 38.45% of covered payroll to 51.93% of covered payroll. Additionally, if the unrecognized investments losses were recognized immediately in the actuarial value of assets, the funded ratio of the Plan would decrease from 81.00% to 70.00%.

## (1) Summary of Significant Accounting Policies

The Department of Water and Power of the City of Los Angeles (the Department) exists as a separate proprietary department of the City of Los Angeles (the City) under and by virtue of the City Charter enacted in 1925 and as revised effective July 2000. The Department's Power Revenue Fund (the Power System) is responsible for the generation, transmission, and distribution of electric power for sale in the City. The Power System is operated as an enterprise fund of the City.

### *(a) Method of Accounting*

The accounting records of the Power System are maintained in accordance with U.S. generally accepted accounting principles (GAAP) for governmental entities. The financial statements have been prepared using the economic resources measurement focus and the accrual basis of accounting. The Power System is accounted for as an enterprise fund and applies all applicable Governmental Standards Board (GASB) pronouncements in its accounting and reporting. In addition, the Power System follows Financial Accounting Standards Board pronouncements issued on or before November 30, 1989, unless those pronouncements conflict with or contradict GASB pronouncements.

The Department's rates are determined by the Board of Water and Power Commissioners (the Board) and are subject to review and approval by the City Council. As a regulated enterprise, the Department utilizes Statement of Financial Accounting Standards (SFAS) No. 71, *Accounting for the Effects of Certain Types of Regulation*, which requires that the effects of the rate-making process be recorded in the financial statements. Such effects primarily concern the time at which various items enter into the determination of changes in fund net assets. Accordingly, the Power System records various regulatory assets and liabilities to reflect the Board's actions. Regulatory liabilities are recorded in deferred credits and regulatory assets are included as deferred debits and under recovered costs on the balance sheets. Management believes that the Power System meets the criteria for continued application of SFAS No. 71, but will continue to evaluate its applicability based on changes in the regulatory and competitive environment (see notes 3 and 14(d)ii).

### *(b) Use of Estimates*

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

### *(c) Utility Plant*

The costs of additions to utility plant and replacements of retired units of property are capitalized. Costs include labor, materials, an allowance for funds used during construction (AFUDC), and allocated indirect charges, such as engineering, supervision, transportation and construction equipment, retirement plan contributions, healthcare costs, and certain administrative and general expenses. The costs of maintenance, repairs, and minor replacements are charged to the appropriate operations and maintenance expense accounts.

(Continued)

### *(d) Impairment of Long-Lived Assets*

The Department follows GASB Statement No. 42, *Accounting and Financial Reporting for Impairment of Capital Assets and for Insurance Recoveries* (GASB No. 42). Governments are required to evaluate prominent events or changes in circumstances affecting capital assets to determine whether impairment of a capital asset has occurred. A capital asset is considered impaired when its service utility has declined significantly and unexpectedly. Under GASB No. 42, impaired capital assets that will no longer be used by the government should be reported at the lower of carrying value or fair value. Impairment losses on capital assets that will continue to be used by the government should be measured using the method that best reflects the cause of the diminished service utility of the capital asset.

### *(e) Depreciation and Amortization*

Depreciation expense is computed using the straight-line method based on service lives for all projects completed after July 1, 1973, and for all office and shop structures, related furniture and equipment, and transportation and construction equipment. Depreciation for facilities completed prior to July 1, 1973 is computed using the 5.0% sinking fund method based on estimated service lives. The Department uses the composite method of depreciation and, therefore, groups assets into composite groups for purposes of calculating depreciation expense. Estimated service lives range from 5 to 75 years. Amortization expense for computer software is computed using the straight-line method over 5 years. Depreciation and amortization expense as a percentage of average depreciable utility plant in service was 3.0% and 2.8% for fiscal years 2010 and 2009, respectively.

### *(f) Nuclear Decommissioning*

The Department owns a 5.70% direct ownership interest in the Palo Verde Nuclear Generating Station (PVNGS). In addition, through its participation in the Southern California Public Power Authority (SCPPA), the Department is party to a contract for an additional 3.95% of the output of PVNGS. Nuclear decommissioning costs associated with the Power System's output entitlement are included in purchased power expense (see note 6).

Decommissioning of PVNGS is expected to commence subsequent to the year 2024. The total cost to decommission the Power System's direct ownership interest in PVNGS is estimated to be $129 million in 2009 dollars. This estimate is based on an updated site-specific study prepared by an independent consultant in 2007. As of June 30, 2010 and 2009, the Power System has recorded $137.3 million and $133.5 million, respectively, to accumulated depreciation to provide for the decommissioning liability.

Prior to December 1999, the Power System contributed $70.2 million to external trusts established in accordance with the PVNGS participation agreement and Nuclear Regulatory Commission requirements. During fiscal year 2000, the Department suspended contributing additional amounts to the trust funds, as management believes that contributions made, combined with reinvested earnings, will be sufficient to fully fund the Department's share of decommissioning costs. The Department will continue to reinvest its investment income on the trust investments into the decommissioning trusts. The Department reinvested $3.9 million and $3.7 million of investment income in fiscal years

2010 and 2009, respectively. Decommissioning funds, which are included in restricted investments, totaled $117.8 million and $113.9 million as of June 30, 2010 and 2009 (at fair value), respectively. The Department's current accounting policy recognizes any realized and unrealized investment earnings from nuclear decommissioning trust funds as a component of accumulated depreciation.

### *(g) Nuclear Fuel*

Nuclear fuel is amortized and charged to fuel for generation on the basis of actual thermal energy produced relative to total thermal energy expected to be produced over the life of the fuel. Under the provisions of the Nuclear Waste Policy Act of 1982, the federal government assesses each utility with nuclear operations, including the Power System, $1 per megawatt hour of nuclear generation. The Power System includes this charge as a current year expense in fuel for generation. See note 14 for discussion of spent nuclear fuel disposal.

### *(h) Natural Gas Field*

In July 2005, the Power System acquired approximately a 74.5% ownership interest in gas properties located in Pinedale, Wyoming. The Power System uses the successful efforts method of accounting for its investment in gas producing properties. Costs to acquire the mineral interest in gas producing properties, to drill and equip exploratory wells that find proven reserves, and to drill and equip development wells are capitalized. Costs to drill exploratory wells that do not find proven reserves are expensed. Capitalized costs of gas producing properties are depleted by the unit-of-production method based on the estimated future production of the proved developed producing wells.

Depletion expense related to the gas field is recorded as a component of fuel for generation expense. During fiscal years 2010 and 2009, the Power System recorded $5.1 million and $6.8 million of depletion expense, respectively.

### *(i) Cash and Cash Equivalents*

As provided for by the State of California Government Code (the Code), the Power System's cash is deposited with the City Treasurer in the City's general investment pool for the purpose of maximizing interest earnings through pooled investment activities. Cash and cash equivalents in the City's general investment pool are reported at fair value and changes in unrealized gains and losses are recorded in the statements of revenues, expenses, and changes in fund net assets. Interest earned on such pooled investments is allocated to the participating funds based on each fund's average daily cash balance during the allocation period. The City Treasurer invests available funds of the City and its independent operating departments on a combined basis. The Power System classifies all cash and cash equivalents that are restricted either by creditors, the Board, or by law, as restricted cash and cash equivalents on the balance sheets. The Power System considers its portion of pooled investments in the City's pool to be cash and cash equivalents.

At June 30, 2010 and 2009, restricted cash and cash equivalents include the following (amounts in thousands):

| | June 30 | |
|---|---|---|
| | **2010** | **2009** |
| Bond redemption and interest funds | $ 229,222 | 203,250 |
| Construction funds | 360,047 | 94,519 |
| Self-insurance fund | 107,884 | 109,394 |
| Other | 2,700 | 2,700 |
| | $ 699,853 | 409,863 |

### *(j) Materials and Fuel*

Materials and supplies are recorded at average cost. Fuel is recorded at lower of cost or market, on an average cost basis.

### *(k) Accrued Unbilled Revenue*

Accrued unbilled revenue is the receivable for estimated energy sales during the period for which the customer has not been billed.

### *(l) Restricted Investments*

Restricted investments include primarily commercial paper, U.S. government and governmental agency securities, and corporate bonds. Investments are reported at fair value and changes in unrealized gains and losses are recorded in the statements of revenues, expenses, and changes in fund net assets except for Nuclear Decommissioning Trust Funds. The stated fair value of investments is generally based on published market prices or quotations from major investment dealers (see note 7).

### *(m) Accrued Employee Expenses*

Accrued employee expenses include accrued payroll and an estimated liability for vacation leave, sick leave, and compensatory time, which is accrued when employees earn the rights to the benefits. Below is a schedule of accrued employee expenses as of June 30, 2010 and 2009 (amounts in thousands):

| | **2010** | **2009** |
|---|---|---|
| Type of expenses: | | |
| Accrued payroll | $ 20,783 | 17,494 |
| Accrued vacation | 47,006 | 46,061 |
| Accrued sick leave | 11,253 | 10,792 |
| Compensatory time | 13,292 | 12,795 |
| Total | $ 92,334 | 87,142 |

(Continued)

### *(n) Debt Expenses*

Debt premium, discount, and issue expenses are deferred and amortized to debt expense using the effective-interest method over the lives of the related debt issues. Gains and losses on refundings related to bonds redeemed by proceeds from the issuance of new bonds are amortized to debt expense using the effective-interest over the shorter of the life of the new bonds or the remaining term of the bonds refunded.

### *(o) Accrued Workers' Compensation Claims*

Liabilities for unpaid workers' compensation claims are recorded at their net present value (see note 13).

### *(p) Customer Deposits*

Customer deposits represent deposits collected from customers upon opening of new accounts. These deposits are obtained when the customer does not have a previously established credit history with the Department. Original deposits plus interest are paid to the customer once a satisfactory payment history is maintained, generally after one to three years.

The Water System is responsible for collection, maintenance, and refunding of these deposits for all the Department customers, including those of the Power System. As such, the Water System's balance sheets include a deposit liability of $68 million and $74 million as of June 30, 2010 and 2009, respectively, for all customer deposits collected. In the event that the Water System defaults on refunds of such deposits, the Power System would be required to pay amounts it owes its customers.

### *(q) Revenues*

The Power System's rates are established by a rate ordinance, which is approved by the City Council. The Power System sells energy to the City's other departments at rates provided in the ordinance. The Power System recognizes energy costs in the period incurred and accrues for estimated energy sold but not yet billed.

Effective October 1, 2006, the Energy Cost Adjustment Factor (ECAF), which is a billing factor defined in the electric rate ordinance was unfrozen. This change allows the Power System to increase or decrease the factor on a quarterly basis in compliance with the ordinance. While this change allows the Power System to fully recover fuel costs, purchased power costs, and other costs outlined in the ordinance, the difference between the amount billed to customers, and the value of the costs allowed to be recovered through the factor create an over/under recovered amount. Costs that are under recovered will be recovered in future periods. Amounts over recovered will be factored into future quarterly rates. As of June 30, 2010 and 2009, the amount of under recovered costs, including the ECAF and the Reliability Cost Adjustment Factor was $250.4 million and $130.4 million, respectively. These balances are recorded as current assets on the balance sheets.

Operating revenues are revenues derived from activities that are billable in accordance with the electric rate ordinance approved by the City Council.

(Continued)

***(r) Capital Contributions***

Capital contributions and other grants received by the Department for constructing utility plant and other activities are recognized when all applicable eligibility requirements, including time requirements, are met.

***(s) Allowance for Funds Used during Construction (AFUDC)***

An AFUDC charge represents the cost of borrowed funds used for the construction of utility plant. Capitalized AFUDC is included as part of the cost of utility plant and as a reduction of debt expenses. As of June 30, 2010 and 2009, the average AFUDC rates were 4.6% and 4.5%, respectively.

***(t) Use of Restricted and Unrestrictive Resources***

The Power System's policy is to use unrestricted resources prior to restricted resources to meet expenses to the extent that it is prudent from an operational perspective. Once it is not prudent, restricted resources will be utilized to meet intended obligations.

**(2) Recent Accounting Pronouncements**

***(a) GASB Statement No. 49***

In fiscal year 2009, the Department adopted GASB Statement No. 49, *Accounting and Financial Reporting for Pollution and Remediation Obligations* (GASB No. 49). This statement addresses accounting and financial reporting standards for pollution (including contamination) remediation obligations, which are obligations to address the current or potential detrimental effects of existing pollution by participating in pollution remediation activities such as site assessments and cleanups. The scope of the statement excludes pollution prevention or control obligations with respect to current operations, and future pollution remediation activities that are required upon retirement of an asset, such as landfill closure and postclosure care and nuclear power plant decommissioning. Prior to adopting this statement, the Department followed Statement of Position 96-1, *Environmental Remediation Liabilities*. The Power System has identified sites that require remediation work and is working with the Department of Toxic Substances and the Los Angeles Regional Water Quality Control Board who have jurisdiction over these sites. The Power System's estimated liability for these sites is approximately $21 million and includes remediation and ongoing operation and maintenance costs where estimable. This estimate includes recoveries of approximately $12 million. During fiscal year 2009, the Power System set up a restricted trust fund in the amount of $2.1 million to provide financial assurance for closure of one of its sites. The Power System's environmental liability is recorded as part of accrued expenses. There was no impact to net assets as of July 1, 2008 as a result of implementation of this pronouncement.

***(b) GASB Statement No. 51***

In June 2007, the GASB issued Statement No. 51, *Accounting and Financial Reporting for Intangible Assets* (GASB No. 51). This statement establishes accounting and financial reporting standards for intangible assets. Intangible assets include, but are not limited to, easements, water rights, timber rights, patents, trademarks, and computer software. The Department adopted

GASB No. 51 effective July 1, 2009. There was no impact to net assets as of July 1, 2009 as a result of implementation of this pronouncement.

***(c) GASB Statement No. 53***

In June 2008, the GASB issued Statement No. 53, *Accounting and Financial Reporting for Derivative Instruments* (GASB No. 53). This statement addresses the recognition, measurement, and disclosure of information regarding derivative instruments entered into by state and local governments. Common types of derivative instruments used by the Department include electricity swaps, forward contracts, and financial natural gas hedges. Governments enter into derivative instruments as investments; as hedges of identified financial risks associated with assets or liabilities, or expected transactions (i.e., hedgeable items); or to lower cost of borrowings. Governments often enter into derivative instruments with the intention of effectively fixing cash flows or synthetically fixing prices. The changes in fair value of derivative instruments that are used for investment purposes or that are reported as investment derivative instruments because of ineffectiveness are reported within the investment revenue classification. Alternatively, the changes in fair value of derivative instruments that are classified as hedging derivative instruments are reported in the statements of net assets or deferrals on the balance sheets. The Department adopted GASB No. 53 in fiscal year 2010. As a result of adopting this statement, the Power System has recorded the fair value of the natural gas financial hedging transactions and a corresponding deferred outflow on the statement of fund net assets as of June 30, 2010. The June 30, 2009 financial statements have been restated to conform to the current year presentation. See note 9 for additional information on derivative instruments.

## (3) Regulatory Matters

***(a) Federal Regulation of Transmission Access***

The Energy Policy Act of 1992 (the Energy Policy Act) made fundamental changes in the federal regulation of the electric utility industry, particularly in the area of transmission. As amended by the Energy Policy Act, Sections 211, 212, and 213 of the Federal Power Act (FPA) provide Federal Energy Regulatory Commission (FERC) authority, upon application by any electric utility, federal power marketing agency, or other person or entity generating electric energy for sale or resale, to require a transmitting utility to provide transmission services (including any enlargement of transmission capacity necessary to provide such services) to the applicant at rates, charges, terms, and conditions set by FERC based on standards and provisions in the FPA. Under the Energy Policy Act, electric utilities owned by municipalities and other public agencies, which own or operate electric power transmission facilities that are used for the sale of electric energy at wholesale rates are "transmitting utilities" subject to the requirements of Sections 211, 212, and 213.

FERC has encouraged in the past the voluntary formation of regional transmission organizations (RTOs) independent from owners of generation and other market participants that will provide transmission access on a nondiscriminatory basis to buyers and sellers of power. Investor-owned utilities (IOUs) and publicly owned utilities have been encouraged to participate in the formation and operation of RTOs, but are not, at this time, being ordered by FERC to participate. FERC has adopted a "go slow" approach to the issue of RTO formation in the western United States; it is

contemporaneously engaged in a wholesale overhaul of the California market design, referred to initially as the Market Design 2002 proceeding and lately as the Market Redesign and Technology Update (MRTU) proceeding. These FERC proceedings will have potential impacts on every electric utility doing business in California. MRTU involves a comprehensive overhaul of the electricity markets administered by California Independent System Operator (CAISO), including the areas of transmission congestion management, trading and scheduling energy in the day ahead, or spot market, improved market power mitigation, and pricing transparency measures and system improvements to increase operational efficiency and enhance reliability, among other things. MRTU was implemented on April 1, 2009. It is not certain at this time what impact, if any, FERC's final decision on MRTU will have on the Power System. In addition, CAISO has announced its intention to implement further market changes over the next four years.

***(b) Federal Energy Legislation of 2005***

On August 8, 2005, the Energy Policy Act of 2005 (the EP Act) was enacted, the first comprehensive energy legislation in over a decade. One of the most significant provisions of the EP Act empowers FERC to certify an Electric Reliability Organization (ERO) to improve the reliability of the nation's "bulk-power system" through mandatory and enforceable electric reliability standards (in contrast to the long-standing voluntary system). The definition of "bulk-power system" does not include facilities used in the local distribution of electric energy. The ERO will file any proposed reliability standard or modification with FERC. A "reliability standard" is a requirement that provides for reliable operation of the bulk-power system. Such a standard includes requirements for the operation of existing transmission facilities or the design of planned additions or modifications to the extent necessary to provide for reliable operation. It does not include, and the ERO may not impose, any requirement to enlarge existing facilities or to construct new transmission or generation. All users, owners, and operators of the bulk-power system are required to comply with the electric reliability standards. The ERO may impose a penalty on a user, owner, or operator for violating a reliability standard, and FERC may order compliance with such a standard and impose a penalty if it finds that a user, owner, or operator is about to engage in an act that would violate a reliability standard.

Based on the EP Act authority vested upon the FERC, the FERC approved the North American Electric Reliability Corporation (NERC) as the ERO, and last year made mandatory more than 80 NERC and Western Electricity Coordinating Council (WECC) reliability standards, all of which are subject to penalties ranging from $1,000 to $1,000,000, depending on the impact of the violation to reliability and other factors. The Department has implemented a NERC/WECC Reliability Standards Compliance Program to proactively prevent, monitor, and stop any potential violations to these standards.

The EP Act authorizes FERC to require nondiscriminatory access to transmission facilities owned by municipal, cooperative, and other transmission companies not currently regulated by FERC, unless exercising this authority would violate a private activity bond rule for purposes of Section 141 of the Internal Revenue Code of 1986. FERC is prohibited from requiring any such entities to join RTOs. The EP Act also allows FERC to issue permits for the construction of new transmission facilities when states have been unable or unwilling to act and allows load-serving entities to use the firm transmission rights, or equivalent tradable or financial transmission rights, in order to deliver output

or purchased energy to the extent required to meet its service obligations. The EP Act does not relieve a load-serving entity from any obligation under state or local law to build transmission or distribution facilities adequate to meet its service obligations, or to abrogate preexisting firm transmission service contracts.

The EP Act directs FERC to establish, by rule, incentive-based rates for transmission no later than August 2006 and requires FERC to establish market transparency rules for the electric wholesale market (entities that have a de minims market presence are exempt from the rules). The EP Act instructs that the market transparency rules must provide for the timely dissemination of information about the availability and prices of wholesale electric energy and transmission service to FERC, state commission, buyers and sellers of wholesale electric energy, users of transmission services, and the public. Within 180 days of the EP Act's enactment, FERC and the Commodity Futures Trading Commission are required to enter into a memorandum of understanding regarding information sharing pursuant to these rules.

In addition, the EP Act prohibits any person from willfully and knowingly reporting false information to any federal agency on the price of wholesale electricity or availability of transmission capacity, or using (directly or indirectly) any manipulative device in contravention of any FERC rule. The EP Act increases civil and criminal penalties, modifies the procedures for review of FERC orders under the FPA, and changes the refund date under the FPA to be effective as of the date an applicable complaint is filed. The EP Act also establishes an entity's right to a refund if (i) it makes a short-term sale of electric energy through an organized market in which the rates for the sale are set by a FERC-approved tariff (not by a contract) and (ii) the sale violates the terms of the tariff or applicable FERC rule in effect at the time of the sale.

The overall impact of the EP Act on the Department cannot be predicted at this time.

### *(c) Potential Federal Energy Legislation for 2010*

**Climate Regulation**

As of August 2009, the 111th United States Congress is contemplating passing federal legislation that can make fundamental changes in the regulation of the electric utility industry. Under the House of Representatives' passed legislation (H.R. 2454 American Clean Energy and Security Act of 2009 – ACES), the following economywide reduction goals of GHGs (carbon dioxide, methane, nitrous oxide, sulfur hexafluoride, hydrofluorocarbons, perfluorocarbons, and nitrogen hexafluoride) are being proposed: 97% of the 2005 levels by 2012; 80% of the 2005 levels by 2020; 58% of the 2005 levels by 2038; and 17% of the 2005 levels by 2050. The bill would delegate authority to FERC to promulgate regulations and enforce the reduction goals.

ACES includes a GHG "Cap and Trade" regulatory program. Under the Cap and Trade program, the amount of GHGs emitted by certain industries will be limited, and emission allowances will be available for trading (one allowance is equal to 1 metric ton of GHGs emitted, measured in tons of carbon dioxide equivalent). The proposal establishes a prohibition of emissions beyond an entity's allowance holdings where penalties will be applied to noncomplying entities. The electricity sector is covered under this provision starting 2012. Approximately 44.6% of allowances are allocated to the

electricity sector starting 2012, and any additional allowances needed may be bought in the market or through the auction process. The total amount of allowances allocated decline each year, and is phased out by 2030. At that time, the electricity sector would need to purchase allowances to cover its GHG emissions.

ACES delegates authority to FERC to provide oversight and regulation of the new Energy Markets created for carbon allowances and offsets. FERC is expected to ensure market transparency and liquidity of allowances and offsets. It will also be in charge of protecting market participants from speculation and manipulation of carbon prices.

In the Senate version of the bill (S. 1462 Energy Bill – Senate Bill), FERC is given the authority to order a change or suspension of any rate, term, or condition if a market emergency occurs, such as market manipulation or abuse, and may require an entity to cease and desist from committing such violations.

On September 30, 2009, the Senate introduced its climate change bill entitled "Clean Energy Jobs and American Power Act" (S. 1733). The Senate Environment and Public Works Committee has held a number of hearings with panels on jobs and opportunities, national security, utilities, adaptation, transportation and the clean energy economy.

As of September 2010, it is unlikely that the 111th United States Congress will pass any comprehensive GHG regulation bill by the end of the session.

**Renewable Electricity Standard**

ACES requires retail electric suppliers to meet a certain percentage of their load with electricity generated from renewable sources and savings. The percentages currently proposed are: 6% of electricity generated from renewables and electricity savings by 2012, and 20% by 2020. This legislation also authorizes FERC (upon petition of the governor of any state) to increase the proportion of compliance that can be met with efficiency savings up to 2/5 for electric suppliers located within that state.

On August 4, 2010, 32 Democratic and Independent Senators sent a letter to Majority Leader Reid calling for inclusion of the "strongest possible" renewable energy standards (RES) provision in an energy bill, mentioning target levels of 20% by 2020 and 25% by 2025. The letter urges Reid not to "weaken the RES by including nonrenewable energy sources." Some Republican senators, such as Sen. Richard Lugar (R-ID), are advocating for allowing resources such as nuclear and clean-coal, with carbon sequestration to be eligible for an energy standard.

**Transmission**

With respect to transmission issues, the Senate Bill addresses planning, sitting, and cost allocation. FERC is to publish rules establishing planning principles for the development of interconnection-wide plans, which identify high-priority national transmission projects, and to lead coordination of such plans. FERC will have the authority to approve the construction of high-priority national transmission projects that it finds to be in the public interest, if the state rejects the

application of the project. Furthermore, FERC is to establish rules governing cost allocation methodologies for high-priority transmission projects, and may allocate costs to Load Servicing Entities within all, or part of a region. The costs may not be allocated unless they are reasonably proportional to measurable economic and regional benefits. Also, costs may be allocated to generators of electricity connected by a high-priority national transmission project.

***(d) Potential Cyber Security Legislation***

On June 9, 2010, the House of Representatives passed, *H.R. 5026: The Grid Reliability and Infrastructure Defense (GRID) Act*, which would provide FERC with new authorities under the Federal Power Act to protect the electric grid against cyber-security and physical threats and vulnerabilities. The GRID Act would give FERC authority to issue temporary emergency orders to deal with imminent threats, as well as authority to order the industry to take specific measures to address grid security vulnerabilities that the commission decides are not addressed adequately by NERC standards. The measure also seeks to improve information sharing between the federal government and the electric power industry.

The overall impact of the proposed legislation on the Department cannot be predicted at this time. It is unlikely that the 111th United States Congress will pass any comprehensive energy legislation.

## (4) Utility Plant

The Power System had the following activities in utility plant during fiscal year 2010 (amounts in thousands):

| | Balance, July 1, 2009 | Additions | Retirements and disposals | Transfers | Balance, June 30, 2010 |
|---|---|---|---|---|---|
| Nondepreciable utility plant: | | | | | |
| Land and land rights | $ 155,379 | 9,082 | — | 1,269 | 165,730 |
| Construction work in progress | 609,115 | 279,142 | — | (456,766) | 431,491 |
| Nuclear fuel | 36,904 | 16,100 | (8,709) | — | 44,295 |
| Natural gas field | 223,617 | 12,854 | (5,074) | — | 231,397 |
| Total nondepreciable utility plant | 1,025,015 | 317,178 | (13,783) | (455,497) | 872,913 |
| Depreciable utility plant: | | | | | |
| Generation | 3,908,768 | 30,023 | (6,129) | 134,665 | 4,067,327 |
| Transmission | 873,025 | 4,764 | (50) | 42,845 | 920,584 |
| Distribution | 5,103,216 | 293,498 | (2,730) | 251,431 | 5,645,415 |
| General | 1,106,781 | 64,029 | (9,583) | 26,556 | 1,187,783 |
| Total depreciable utility plant | 10,991,790 | 392,314 | (18,492) | 455,497 | 11,821,109 |
| Accumulated depreciation: | | | | | |
| Generation | (2,244,648) | (115,612) | 6,129 | — | (2,354,131) |
| Transmission | (312,584) | (22,318) | 50 | — | (334,852) |
| Distribution | (2,145,666) | (160,696) | 2,730 | — | (2,303,632) |
| General | (697,265) | (34,970) | 9,583 | — | (722,652) |
| Total accumulated depreciation | (5,400,163) | (333,596) | 18,492 | — | (5,715,267) |
| Total utility plant, net | $ 6,616,642 | 375,896 | (13,783) | — | 6,978,755 |

Depreciation and amortization expense during fiscal year 2010 was $337.9 million.

Land and land rights are recorded on the balance sheet as utility plant in their functional category.

(Continued)

The Power System had the following activities in utility plant during fiscal year 2009 (amounts in thousands):

| | Balance, July 1, 2008 | Additions | Retirements and disposals | Transfers | Balance, June 30, 2009 |
|---|---|---|---|---|---|
| Nondepreciable utility plant: | | | | | |
| Land and land rights | $ 155,707 | 21 | (349) | — | 155,379 |
| Construction work in progress | 889,226 | 371,182 | — | (651,293) | 609,115 |
| Nuclear fuel | 32,982 | 10,639 | (6,717) | — | 36,904 |
| Natural gas field | 228,824 | 1,614 | (6,821) | — | 223,617 |
| Total nondepreciable utility plant | 1,306,739 | 383,456 | (13,887) | (651,293) | 1,025,015 |
| Depreciable utility plant: | | | | | |
| Generation | 3,487,385 | 7,541 | (2,019) | 415,861 | 3,908,768 |
| Transmission | 797,845 | 5,829 | (2,205) | 71,556 | 873,025 |
| Distribution | 4,711,830 | 236,305 | (2,222) | 157,303 | 5,103,216 |
| General | 1,027,269 | 73,230 | (291) | 6,573 | 1,106,781 |
| Total depreciable utility plant | 10,024,329 | 322,905 | (6,737) | 651,293 | 10,991,790 |
| Accumulated depreciation: | | | | | |
| Generation | (2,133,877) | (112,790) | 2,019 | — | (2,244,648) |
| Transmission | (298,689) | (16,100) | 2,205 | — | (312,584) |
| Distribution | (2,014,129) | (133,759) | 2,222 | — | (2,145,666) |
| General | (672,543) | (25,013) | 291 | — | (697,265) |
| Total accumulated depreciation | (5,119,238) | (287,662) | 6,737 | — | (5,400,163) |
| Total utility plant, net | $ 6,211,830 | 418,699 | (13,887) | — | 6,616,642 |

Depreciation and amortization expense during fiscal year 2009 was $293.2 million.

Land and land rights are recorded on the balance sheet as utility plant in their functional category.

(Continued)

## (5) Jointly Owned Utility Plant

The Power System has direct interests in several electric generating stations and transmission systems, which are jointly owned with other utilities. As of June 30, 2010 and 2009, utility plant includes the following amounts related to the Power System's ownership interest in each jointly owned utility plant (amounts in thousands, except as indicated):

| | Ownership interest | Share of capacity (MWs) | Utility plant in service June 30, 2010 Cost | Utility plant in service June 30, 2010 Accumulated depreciation | Utility plant in service June 30, 2009 Cost | Utility plant in service June 30, 2009 Accumulated depreciation |
|---|---|---|---|---|---|---|
| Palo Verde Nuclear Generating Station | 5.7% | 224 | $ 581,844 | 345,321 | 564,654 | 332,324 |
| Navajo Generating Station | 21.2 | 477 | 330,465 | 293,208 | 316,560 | 284,486 |
| Mohave Generating Station | 10.0 | — | 61,226 | 57,852 | 57,913 | 57,852 |
| Pacific Intertie DC Transmission Line | 40.0 | 1,240 | 182,363 | 48,589 | 170,808 | 44,599 |
| Other transmission systems | — | Various | 85,419 | 47,047 | 84,779 | 44,652 |
| | | | $ 1,241,317 | 792,017 | 1,194,714 | 763,913 |

The Power System will incur certain minimal operating costs related to the jointly owned facilities, regardless of the amount or its ability to take delivery of its share of energy generated. The Power System's proportionate share of the operating costs of the joint plants is included in the corresponding categories of operating expenses.

## (6) Purchase Power Commitments

As of June 30, 2010, the Power System has entered into a number of energy and transmission service contracts, which involve substantial commitments as follows (amounts in thousands, except as indicated):

| | | | The Power System's interest in agency's share | | |
|---|---|---|---|---|---|
| | Agency | Agency share | Interest | Capacity (MWs) | Outstanding principal |
| Intermountain Power Project | IPA | 100.0% | 58.9% | 1,060 | $ 1,016,243 |
| Palo Verde Nuclear Generating Station | SCPPA | 5.9 | 67.0 | 151 | 59,945 |
| Mead-Adelanto Project | SCPPA | 68.0 | 36.0 | 313 | 67,999 |
| Mead-Phoenix Project | SCPPA | 17.8 – 22.4 | 25.0 | 148 | 15,079 |
| Southern Transmission System | SCPPA | 100.0 | 60.0 | 1,142 | 536,226 |
| Milford I Wind | SCPPA | 100.0 | 92.5 | 185 | 219,442 |
| Linden Wind Energy | SCPPA | 100.0 | 90.0 | 45* | 125,712 |

* For the first three years, LADWP will receive 100% (50 MWs), unless Glendale exercises its option to take 10%.

**IPA** – The Intermountain Power Agency (IPA) is an agency of the State of Utah established to own, acquire, construct, operate, maintain, and repair the Intermountain Power Project (IPP). The Power System serves as the project manager and operating agent of IPP.

**SCPPA** – The Southern California Public Power Authority is a California Joint Powers Agency. SCPPA's interest in the Mead-Phoenix Project includes three components.

The above agreements require the Power System to make certain minimum payments, which are based primarily upon debt service requirements. In addition to average annual fixed charges of approximately $293 million during each of the next five years, the Power System is required to pay for operating and maintenance costs related to actual deliveries of energy under these agreements (averaging approximately $384 million annually during each of the next five years). The Power System made total payments under these agreements of approximately $536 million and $496 million in fiscal years 2010 and 2009, respectively. These agreements are scheduled to expire from 2027 to 2035.

The Power System earned fees under the IPP project manager and operating agent agreements totaling $22.9 million and $18.4 million in fiscal years 2010 and 2009, respectively.

***(a) Long-Term Notes Receivable***

Under the terms of its purchase power agreement with IPA, the Department is charged for its output entitlements based on its share of IPA's costs, including debt service. During fiscal year 2000, the Department restructured a portion of this obligation by transferring $1.11 billion to IPA in exchange for long-term notes receivable. The funds transferred were obtained from the debt reduction trust funds and through the issuance of new variable rate debentures (see notes 7 and 10). IPA used the proceeds from these transactions to defease and to tender bonds with par values of approximately $618 million and $611 million, respectively.

On September 7, 2000, the Department paid $187 million to IPA in exchange for additional long-term notes receivable. IPA used the proceeds to defease bonds with a face value of $198 million.

On July 20, 2005, the Department paid $97 million to IPA in exchange for additional long-term notes receivable. IPA used the proceeds to defease bonds with a face value of $92 million.

The IPA notes are subordinate to all of IPA's publicly held debt obligations. The Power System's future payments to IPA will be partially offset by interest payments and principal maturities from the subordinated notes receivable. The net IPA notes receivable balance totaled $1.08 billion and $1.11 billion as of June 30, 2010 and 2009, respectively.

The IPA notes pay interest and principal monthly and mature on July 1, 2023. The interest rates range from 4.9% to 6.4%, subject to adjustments related to IPA bond refundings.

***(b) Energy Entitlement***

The Department has a contract through 2017 with the U.S. Department of Energy for the purchase of available energy generated at the Hoover Power Plant. The Power System's share of capacity at

Hoover is approximately 500 MWs (maximum capability). The cost of power purchased under this contract was $16 million as of June 30, 2010 and 2009.

The Department has a contract through 2026 with SCPPA for the purchase of available energy generated at the Pebble Springs Wind Project located in Gilliam County, Oregon. The Power System's share of capacity at Pebble Springs is approximately 69 MWs (maximum capacity). The cost of power purchased under this contract was $11 million and $5 million as of June 30, 2010 and June 30, 2009, respectively.

### *(c) Electricity Swap and Forward Contracts*

In order to obtain the highest market value on energy that is sold into the wholesale market, the Department monitors the sales price of energy, which varies based on which hub the energy is to be delivered. There are three primary hubs within the Department's transmission region: Palo Verde, California Oregon Border and Mead. The Department enters into various locational swap transactions with other electric utilities in order to effectively utilize its transmission capacity and to achieve the most economical exchange of energy purchased and sold.

The Department procures renewable energy resources located remotely. These resources provide intermittent and limited source of energy and these resources are not directly connected to the Department's transmission system. In order to receive firm renewable energy, the Department entered into a green for green energy exchange with the same or different Renewable Energy Credit source.

The Department enters into power and natural gas forward contracts in order to meet the electricity requirements to serve its customers. To assist the Department in achieving its Renewable Portfolio Standards (RPS) goal of 20% by 2010, some of the forward purchases made are renewable energy and biomethane gas.

The Department does not enter into swap and forward transactions for trading purposes. All of these transactions are intended to be used in the Department's normal course of operations. The Department is exposed to risk of nonperformance if the counterparties default or if the swap agreements are terminated.

As of June 30, 2010, the Power System had the following Electricity Swap and Forward Contracts, which are not recorded in the Power System's financial statements based on the criteria in GASB No. 53 (amounts in thousands):

| Description | Notional amount (total contract quantities) | Contract price range dollar per unit | First effective date | Last termination date | Fair value | Cash paid at inception |
|---|---|---|---|---|---|---|
| Electricity swaps: | | | | | | |
| Purchases | 1,563,264 MW | $ 36.00 – 71.52 | 07/01/10 | 12/31/10 | $ (80,258) | — |
| Sales | 1,562,996 MW | 8.05 – 53.70 | 07/01/10 | 12/31/10 | 62,819 | — |
| Forward contracts: | | | | | | |
| Electricity | 891,361 MW | 26.50-81.15 | 07/01/10 | 12/31/11 | (27,316) | — |
| Natural gas | 39,441,400 MMBtu | 5.28 – 9.80 | 07/01/10 | 07/31/14 | (108,884) | — |

(Continued)

As of June 30, 2009, the Power System had the following Electricity Swap and Forward Contracts, which are not recorded in the Power System's financial statements (amounts in thousands):

| Description | Notional amount (total contract quantities) | Contract price range dollar per unit | First effective date | Last termination date | Fair value | Cash paid inception |
|---|---|---|---|---|---|---|
| Electricity swaps: | | | | | | |
| Purchases | 902,598 MW | $ 40.00 – 74.95 | 07/01/09 | 12/31/09 | $ (10,736) | — |
| Sales | 902,598 MW | 24.50 – 48.70 | 07/01/09 | 12/31/09 | 1,106 | — |
| Forward contracts: | | | | | | |
| Electricity | 1,778,934 MW | 37.52 – 75.67 | 07/01/09 | 12/31/11 | (42,668) | — |
| Natural gas | 25,440,000 MMBtu | 5.28 – 5.71 | 07/01/09 | 01/31/14 | (3,981) | — |

## (7) Cash, Cash Equivalents, and Investments

### *(a) Restricted and Other Investments*

A summary of the Power System's restricted and other investments is as follows (amounts in thousands):

| | June 30 2010 | June 30 2009 |
|---|---|---|
| Restricted and other investments: | | |
| Restricted investments: | | |
| Debt Reduction Trust Funds | $ 529,338 | 547,282 |
| Nuclear Decommissioning Trust Funds | 117,752 | 113,923 |
| Natural Gas Trust Fund | 3,242 | 25,040 |
| Hazardous Waste Treatment Trust Fund | 2,140 | 2,122 |
| SCPPA Palo Verde investment | 30,188 | 33,707 |
| Total restricted investments | 682,660 | 722,074 |
| Other investments: | | |
| Cash collateral received from securities lending transactions – Department program only* (see note 8) | — | 8,591 |
| Total restricted and other investments | $ 682,660 | 730,665 |

* The Power System also has $13,581 and $0 of cash collateral received from securities lending transactions in the City's securities lending program as of June 30, 2010 and 2009, respectively (see notes 7(b) and 8).

(Continued)

All restricted and other investments are to be used for a specific purpose as follows:

**Debt Reduction Trust Funds**

The debt reduction trust funds were established during fiscal year 1997 to provide for the payment of principal and interest on long-term debt obligations and purchased power obligations arising from the Department's participation in IPP and SCPPA (see note 6). The Department has transferred funds from purchased power precollections into these trust funds. Funds from operations may also be transferred by management as funds become available.

**Nuclear Decommissioning Trust Funds**

Nuclear decommissioning trust funds will be used to pay the Department's share of decommissioning PVNGS at the end of its useful life (see note 1).

**Natural Gas Trust Fund**

The natural gas trust fund was established to serve as depository to pay for costs and to post margin or collateral in connection with contracts for the purchase and delivery of financial transactions for natural gas. These transactions are entered into to stabilize the natural gas portion of the Department's fuel for generation costs.

**Hazardous Waste Treatment Storage and Disposal Trust Fund**

The hazardous waste treatment storage and disposal trust fund was established to provide financial assurance for closure of the Main Street treatment and disposal facility.

**SCPPA Palo Verde Investment**

The SCPPA Palo Verde investment is a fixed rate investment held by SCPPA to be drawn down over the next 7 years to pay for purchased power obligations arising from the Department's participation in the SCPPA Palo Verde project. The fixed interest rate is 4.97% and the maturity date is June 25, 2017.

As of June 30, 2010, the Power System's securities lending cash collateral and restricted investments and their maturities are as follows (in thousands):

| Investment type | Fair value | Investment maturities: 1 to 30 days | 31 to 60 days | 61 to 365 days | 366 days to 5 years | Over 5 years |
|---|---|---|---|---|---|---|
| U.S. agencies | $ 501,537 | 15,011 | 5,030 | 5,036 | 407,404 | 69,056 |
| Medium term notes | 33,274 | 359 | 1,556 | 13,780 | 17,579 | — |
| Commercial paper | 46,569 | 13,748 | 12,997 | 19,824 | — | — |
| Certificates of deposit | 26,008 | 6,000 | 4,999 | 15,009 | — | — |
| Municipal commercial paper | 7,200 | 2,200 | 5,000 | — | — | — |
| California local agency bonds | 23,412 | 18,412 | — | 5,000 | — | — |

i. *Interest Rate Risk*

The Department's investment policy limits the maturity of its investments to a maximum of 30 years for U.S. government agency securities; 5 years for medium-term corporate notes, California local agency obligations, and California state obligations and municipal bonds; 270 days for commercial paper; 397 days for certificates of deposit; 180 days for Bankers' acceptances; and 45 days for repurchase agreements purchased with cash collateral from securities lending agreements.

ii. *Credit Risk*

Under its investment policy and the Code, the Department is subject to the prudent investor standard of care in managing all aspects of its portfolios. The prudent investor standard requires that the Department "…shall act with care, skill, prudence, and diligence under the circumstances then prevailing, including, but not limited to, the general economic conditions and the anticipated needs of the agency, that a prudent person acting in a like capacity and in familiarity with those matters would use in the conduct of funds of a like character and with like aims, to safeguard the principal and maintain the liquidity needs of the agency."

The U.S. government agency securities in the portfolio consist of securities issued by government-sponsored enterprises, which are not explicitly guaranteed by the U.S. government. As of June 30, 2010 and 2009, the U.S. government agency securities in the portfolio carried the highest possible credit ratings by the Nationally Recognized Statistical Rating Organizations (NRSROs) that rated them.

The Department's investment policy specifies that medium-term corporate notes must be rated in a rating category of "A" or its equivalent or better by a NRSRO. Of the Power System's investments in corporate notes as of June 30, 2010, $24,221,621 (73%) was rated in the category of AA and $8,693,664 (26%) was rated in the category of A by at least one NRSRO. The remaining $358,463 (1%) of investments in corporate notes were not rated. Of the Power System's investments in corporate notes as of June 30, 2009, $33,861,542 (57%) was rated in the category of AA and $25,737,850 (43%) was rated in the category of A by at least one NRSRO. The remaining $267,713 (1%) of investments in corporate notes were not rated.

The Department's investment policy specifies that commercial paper must be of the highest ranking or of the highest letter and number rating as provided for by at least two NRSROs. As of June 30, 2010 and 2009, all of the Power System's investments in commercial paper were rated with at least the highest letter and number rating as provided by at least two NRSROs.

The Department's investment policy specifies that negotiable certificates of deposit must be of the highest ranking or letter and number rating as provided for by at least two NRSROs and that for nonnegotiable certificates of deposit, the full amount of principal and interest is insured by the Federal Deposit Insurance Corporation (FDIC) or National Credit Union Administration. As of June 30, 2010, the Power System's investments in certificates of deposits included $25,008,335 of negotiable certificates of deposit with at least the highest letter and number rating as provided by at least two NRSROs and $1,000,000 of nonnegotiable certificates of deposit fully insured by the FDIC. As of June 30, 2009, the Power System's investments in certificates of deposits included $10,018,030 of negotiable certificates of deposit of the highest ranking as provided by at least two NRSROs and $1,000,000 of nonnegotiable certificates of deposit fully insured by the FDIC.

The Department's investment policy specifies that California local agency obligations, which include municipal commercial paper, must be rated in a rating category of "A" or its equivalent or better by a NRSRO. Of the Power System's investments in California municipal commercial paper as of June 30, 2010, $7,200,000 (100%) was rated with the highest

short-term letter and number rating by two NRSROs. Of the Power System's investments in California local agency bonds as of June 30, 2010, $13,445,000 (57%) was rated in the category of AAA and $9,967,036 (43%) was rated with the highest short-term ranking as provided by at least one NRSRO. Of the Power System's investments in California local agency bonds as of June 30, 2009, $8,945,000 (90%) was rated in the category of AAA and $1,035,850 (10%) was rated in the category of AA by at least one NRSRO.

The Department's investment policy specifies that State of California obligations must be rated in a rating category of "A" or its equivalent or better by a NRSRO. As of June 30, 2010 and 2009, the Power System's investments in State of California obligations were rated AAA by at least one NRSRO.

The Department's investment policy specifies that banker's acceptances must be of the highest ranking or letter and number rating as provided for by at least two NRSROs. As of June 30, 2010, all of the Power System's investments in banker's acceptances were rated with the highest letter and number rating as provided by three NRSROs.

The Department's investment policy specifies that money market funds may be purchased as allowed under the Code, which requires that the fund must have either 1) attained the highest ranking or highest letter and numerical rating provided by not less than two NRSROs or 2) retained an investment advisor registered or exempt from registration with the Securities and Exchange Commission with not less than five years' experience in managing money market mutual funds with assets under management in excess of $500 million. As of June 30, 2010 and 2009, each of the money market funds in the portfolio had the highest possible ratings by three NRSROs, specifically AAAm by Standard and Poor's Corporation (S&P), Aaa by Moody's Investors Service (Moody's), and AAA by Fitch Ratings (Fitch).

The Department's securities lending cash collateral investment policy specifies that money market funds may be purchased with cash collateral as allowed under the Code. As of June 30, 2010 and 2009, the money market funds purchased with cash collateral were in compliance with the Code by having either attained the highest possible ratings by at least two NRSROs or retained an investment advisor registered or exempt from registration with the Securities and Exchange Commission with not less than five years' experience in managing money market mutual funds with assets under management in excess of $500 million.

iii. *Concentration of Credit Risk*

The Department's investment policy specifies that there is no percentage limitation on the amount that can be invested in U.S. government agency securities, except that a maximum of 30% of the cost value of the portfolio may be invested in the securities of any single U.S. government agency issuer.

Of the Power System's total investments as of June 30, 2010, $167,214,799 (24%) was invested in securities issued by the Federal Home Loan Mortgage Corporation; $156,965,167 (23%) was invested in securities issued by the Federal National Mortgage Association;

$120,082,514 (18%) was invested in securities issued by the Federal Home Loan Bank; and $51,254,063 (8%) was invested in securities issued by the Federal Farm Credit Bank.

Of the Power System's total investments as of June 30, 2009, $159,456,292 (22%) was invested in securities issued by the Federal Home Loan Bank; $154,727,884 (21%) was invested in securities issued by the Federal Home Loan Mortgage Corporation; and $140,307,268 (19%) was invested in securities issued by the Federal National Mortgage Association.

***(b) Pooled Investments***

The Power System's cash, cash equivalents, and its collateral value of the City's securities lending program are included within the City Treasury's General and Special Investment Pool (the Pool). As of June 30, 2010 and 2009, the Power System's share of the Pool was $1,137,289,000 and $854,539,000, which represents approximately 16% and 15% of the Pool, respectively.

The cash balances of substantially all funds on deposit in the City Treasury are pooled and invested by the City Treasurer for the purpose of maximizing interest earnings through pooled investment activities but safety and liquidity still take precedence over return. Interest earned on pooled investments is allocated to the participating funds based on each fund's average daily deposit balance during the allocation period with all remaining interest allocated to the General Fund. Investments in the City Treasury are stated at fair value based on quoted market prices except for money market investments that have remaining maturities of one year or less at time of purchase, which are reported at amortized cost.

Pursuant to California Government Code Section 53607 and Los Angeles City Council File No. 94-2160, the City Treasury shall render to the City Council a statement of investment policy (the Policy) annually. City Council File No. 09-3050 was adopted on January 27, 2010 as the City's investment policy for calendar year 2010. The Policy governs the City's pooled investment practices. The Policy addresses soundness of financial institutions in which the Treasurer will deposit funds and types of investment instruments permitted by California Government Code Sections 53600-53635 and 16429.1.

Examples of investments permitted by the Policy are obligations of the U.S. Treasury and government agencies, commercial paper notes, certificates of deposit placement service, banker's acceptances, medium-term notes, mutual funds, money market mutual funds, and the State of California Local Agency Investment Fund.

At June 30, 2010, the investments held in the City Treasury's General and Special Investment Pool Programs and their maturities are as follows (in thousands):

| Type of investments | Amount | Investment maturities | | | |
|---|---|---|---|---|---|
| | | 1 to 30 days | 31 to 60 days | 61 to 365 days | 366 days to 5 years |
| U.S. Treasury notes | $ 1,977,346 | — | — | — | 1,977,346 |
| U.S. Treasury bills | 1,002,601 | 474,965 | 288,831 | 238,805 | — |
| U.S. sponsored agency issues | 2,830,258 | 474,135 | 590,834 | 693,595 | 1,071,694 |
| Medium-term notes | 735,133 | — | — | 20,036 | 715,097 |
| Commercial paper | 594,181 | 322,519 | 117,918 | 153,744 | — |
| Certificates of deposit | 9,000 | — | — | 9,000 | — |
| Short-term investment funds | 41,770 | 41,770 | — | — | — |
| Securities lending cash collateral: | | | | | |
| U.S. Treasury notes | 54,031 | — | — | — | 54,031 |
| U.S. sponsored agency issues | 111,068 | — | — | — | 111,068 |
| Total general and special pools | $ 7,355,388 | 1,313,389 | 997,583 | 1,115,180 | 3,929,236 |

*Interest Rate Risk*. The Policy limits the maturity of its investments to a maximum of five years for the U.S. Treasury and government agency securities, medium-term notes, CD placement service, collateralized bank deposits, mortgage pass-through securities, and bank/time deposits; one year for repurchase agreements; 270 days for commercial paper; 180 days for bankers' acceptances, and 92 days for reverse repurchase agreements.

*Credit Risk*. The Policy establishes minimum credit ratings requirement for investments. There is no credit quality requirement for local agency bonds, U.S. Treasury Obligations, State of California Obligations, California Local Agency Obligations, and U.S. Agencies (U.S. government-sponsored enterprises) securities in the Policy. The City's $2.83 billion investments in U.S. government-sponsored enterprises consist of securities issued by the Federal Home Loan Bank – $887.3 million, Federal National Mortgage Association – $763.7 million, Federal Home Loan Mortgage Corporation – $476.2 million, Federal Farm Credit Bank – $164.1 million, Tennessee Valley Authority – $38.5 million, and Freddie Mac – $500.5 million. Of the City's $2.83 billion investments in U.S. agencies securities, $1,041.8 million are rated "AAA" by S&P and "Aaa" by Moody's; $1,788.5 million are not rated by the NRSRO, but have an implied highest rating in the market.

Medium-term notes must be issued by corporations organized and operating within the United States or by depository institutions licensed by the United States or any state and operating within the United States. Medium-term notes must have at least an "A" rating. The City's $735.1 million investments in medium-term notes consist of securities issued by banks and corporations that comply with these requirements and were rated "A" or better by S&P and "A3" or better by Moody's.

Commercial paper issues must have a minimum of "A-1" or equivalent rating. If the issuer has issued long-term debt, it must be rated "A" without regard to modifiers. Issuing corporation must be

organized and operating within the United States and have assets in excess of $500 million. The City's $594.2 million investments in commercial paper comply with these requirements and were rated A-1+/A-1 by S&P and P-1 by Moody's.

The issuers of the certificates of deposit were not rated.

*Concentration of Credit Risk.* The Policy does not allow more than 40% of its investment portfolio be invested in commercial paper and bankers' acceptances, 30% in certificates of deposit and medium-term notes, 20% in mutual funds and money market mutual funds, and mortgage pass-through securities. The Policy further provides for a maximum concentration limit of 10% in any one issuer of commercial paper as well as in any one mutual fund, and 30% in banker's acceptances of any one commercial bank. There is no percentage limitation on the amount that can be invested in the U.S. government agencies. The City's pooled investments comply with these requirements. GAAP requires disclosure of certain investments in any one issuer that represent 5% or more of total investments. Of the City's total pooled investments as of June 30, 2010, $887.3 million (12%) was invested in securities issued by the Federal Home Loan Bank, $476.2 million (6%) was invested in securities issued by Federal Home Loan Mortgage Corporation, $763.7 million (10%) was invested in securities issued by Federal National Mortgage Association, and $500.5 million (7%) was invested in securities issued by Freddie Mac.

At June 30, 2009, the investments held in the Pool's programs and their maturities are as follows (amounts in thousands):

| | | Investment maturities | | | |
|---|---|---|---|---|---|
| **Type of investments** | **Amount** | **1 to 30 days** | **31 to 60 days** | **61 to 365 days** | **366 days to 5 years** |
| U.S. Treasury notes | $ 1,613,049 | — | — | — | 1,613,049 |
| U.S. Treasury bills | 44,984 | — | 44,984 | — | — |
| U.S. sponsored agency issues | 1,428,909 | 164,842 | 82,201 | 182,052 | 999,814 |
| Medium-term notes | 1,047,781 | — | 25,153 | 125,866 | 896,762 |
| Commercial paper | 1,348,312 | 992,287 | 235,582 | 120,443 | — |
| Guaranteed investment contracts | 70,081 | 70,081 | — | — | — |
| Certificates of deposit | 9,000 | — | — | 9,000 | — |
| Short-term investment funds | 3 | 3 | — | — | — |
| Total general and special pools | $ 5,562,119 | 1,227,213 | 387,920 | 437,361 | 3,509,625 |

*Interest Rate Risk.* The City's pooled investment policy limits the maturity of its investments to a maximum of five years for U.S. Treasury and federal agency securities, medium-term corporate notes, and bonds issued by local agencies; 270 days for commercial paper, and 32 days for repurchase agreements.

*Credit Risk.* The City's pooled investment policy requires that for all classes of investments, except linked banking program CDs, the issuers' minimum credit ratings shall be S&P A-1/A or Moody's P-1/A2 and, if available, Fitch IBCA F1/A. In addition, domestic banks are limited to those with a

current Fitch Ratings BankWatch of "B/C" or better and an A-1 short-term rating. The City Treasurer is granted the authority to specify approved California banks with a Fitch Ratings BankWatch of "C" or better and an A-2 rating where appropriate. In addition to a "AAA" rating for country risk, foreign banks with domestic licensed offices must be rated "B" or better and TBW-1 short-term rating by Fitch Ratings BankWatch. Domestic savings banks must be rated "B/C" or better and a TBW-1 short-term rating by Fitch Ratings BankWatch.

Medium-term notes must be issued by corporations operating within the United States and having total assets in excess of $500 million. Commercial paper issuers must meet the preceding requirement or must be issued by corporations organized in the United States as a special purpose corporation, trust, or limited liability company having programwide credit enhancements.

At June 30, 2009, the City's $1.43 billion investments in U.S. government-sponsored enterprises consist of securities issued by the Federal Home Loan Bank – $472.7 million, Federal National Mortgage Association – $272.4 million, Federal Home Loan Mortgage Corporation – $398.9 million, Federal Farm Credit Bank – $126.0 million, Tennessee Valley Authority – $37.1 million, Freddie Mac Discount Note – $69.3 million, and Farmer Mac Federal Agricultural – $52.6 million. As of June 30, 2009, these securities carried the highest ratings of AAA (S&P) and Aaa (Moody's).

The City's $1.05 billion investments in medium-term notes consist of securities issued by banks and corporations that comply with the requirements discussed above and were rated "A" or better by S&P and "A3" or better by Moody's.

The City's $1.35 billion investments in commercial paper comply with the requirements discussed above and were rated A-1+/A-1 by S&P and P-1 by Moody's.

The issuers of the certificates of deposits are not rated.

## (8) Securities Lending Transactions

The Power System participates in a securities lending program as follows (collateral amounts in thousands):

| Program | June 30 2010 | 2009 |
|---|---|---|
| Department Program | $ — | 8,591 |
| City of Los Angeles Program | 13,581 | — |
| | $ 13,581 | 8,591 |

### *(a) Department Program*

In December 1999, the Department initiated a securities lending program managed by its custodial bank to increase interest income. The bank lends up to 20% of the investments held in the debt

reduction trust funds, decommissioning trust funds, postemployment healthcare benefits trust for securities, cash collateral, or letters of credit equal to 102% of the market value of the loaned securities, and interest, if any. The Department can sell securities received as collateral only in the event of borrower default. Both the investments purchased with the cash collateral received and the related liability to repay the cash collateral are reported on the balance sheets. The Department suspended its securities lending program and terminated all securities lending transactions in March 2010. A summary of the Power System's portion of the Department's securities lending program as of June 30, 2010 and 2009 is as follows (amounts in thousands):

| | June 30 | | | |
|---|---|---|---|---|
| | 2010 | | 2009 | |
| Securities lent for cash collateral | Fair value of underlying securities | Collateral book value | Fair value of underlying securities | Collateral book value |
| U.S. government and agency securities | $ — | — | 8,387 | 8,591 |

Cash collateral received is reinvested by the lending agent in open repurchase agreements, money market funds, and short-term commercial papers so that the maturities of reinvested cash collateral sufficiently match the maturities of the underlying securities lent. The lending agent provides indemnification for borrower default. There were no violations of legal or contractual provisions and no borrower or lending agent default losses during fiscal years 2010 and 2009.

***(b) General Investment Pool Program***

The Power System also participates in the City's securities lending program through the pooled investment fund. The City's program has substantially the same terms as the Department's direct securities lending program. The Department recognizes its proportionate share of the cash collateral received for securities loaned and the related obligation for the general investment pool.

Securities lending is permitted and limited under provisions of California Government Code Section 53601. The City Council approved the Securities Lending Program (the SLP) on October 22, 1991 under Council File No. 91-1860, which complies with the California Government Code. The objectives of the SLP in priority order are: safety of loaned securities and prudent investment of cash collateral to enhance revenue from the investment program. The SLP is governed by a separate policy and guidelines.

The City's custodial bank acts as the securities lending agent. In the event a counterparty defaults by reason of an act of insolvency, the bank shall take all actions which it deems necessary or appropriate to liquidate permitted investment and collateral in connection with such transaction and shall make a reasonable effort for two business days (Replacement Period) to apply the proceeds thereof to the purchase of securities identical to the loaned securities not returned. If during the Replacement Period the collateral liquidation proceeds are insufficient to replace any of the loaned securities not returned, the bank shall, subject to payment by the City of the amount of any losses on any permitted investments, pay such additional amounts as necessary to make such replacement.

Under the provisions of the SLP, and in accordance with the California Government Code, no more than 20% of the market value of the General Investment Pool is available for lending. The City receives cash as collateral on loaned securities, which is reinvested in securities permitted under the Policy. In accordance with the California Government Code, the securities lending agent marks to market the value of both the collateral and the reinvestments daily. Except for open loans where either party can terminate a lending contract on demand, term loans have a maximum life of 92 days. Earnings from securities lending accrue to the Pool and are allocated on a pro rata basis to all Pool participants.

The City's SLP that was temporarily suspended in November 2008 due to the extreme volatility in the financial markets was resumed on April 22, 2010. At June 30, 2010, the assets and liabilities arising from the reinvested cash collateral were recognized in the respective participants' financial statements. During the fiscal year 2010, collateralizations on all loaned securities were compliant with the required 102% of the market value. The City can sell collateral securities only in the event of borrower default. The lending agent provides indemnification for borrower default. There were no violations of legal or contractual provisions and no borrower or lending agent default losses during the year. There was no credit risk exposure to the City because the amounts owed to the borrowers exceeded the amounts borrowed. Loaned securities are held by the City's agents in the City's name and are not subject to custodial credit risk.

At June 30, 2010 and 2009, the assets and liabilities arising from the reinvested cash collateral were recognized in the respective participants' financial statements. During the fiscal year, collateralizations on all loaned securities were within the required 102% of market value. The City can sell collateral securities only in the event of borrower default. The lending agent provides indemnification for borrower default. There were no violations of legal or contractual provisions and no borrower or lending agent default losses during the year. There was no credit risk exposure to the City as of June 30, 2009 because the amounts owed to the borrowers exceeded the amounts borrowed. Loaned securities are held by the City's agents in the City's name and are not subject to custodial credit risk.

## (9) Derivative Instruments

In accordance with GASB No 53, the Power System records the fair value of its hedging derivative instruments, financial natural gas hedges, on the statement of net assets. As of June 30, 2010 and 2009, the fair values of the financial natural gas hedges were approximately $(84.3) million and approximately $(112.6) million, respectively.

### *(a) Financial Natural Gas Hedges*

The Department enters into natural gas hedging contracts in order to stabilize the cost of gas needed to produce electricity to serve its customers. It is designed to cap gas prices over a portion of the forecasted gas requirements.

The Department does not speculate when entering into financial transactions. Financial hedges are variable to fixed rate swaps and are layered by volumetric averaging. The Department is exposed to financial settlement risk if the counterparties default and/or the agreements are terminated.

As of June 30, 2010, the Power System's financial natural gas hedges by fiscal year are the following (amounts in thousands):

| Derivative description | Notional amount (Total contract quantities*) | Contract price range dollar per unit | First effective date | Last termination date | Fair value | Cash paid at derivative inception |
|---|---|---|---|---|---|---|
| Financial natural gas: | | | | | | |
| FY 2010-11 | 14,928,000 | 5.07 – 7.70 | 07/01/10 | 06/30/11 | $ (32,809) | — |
| FY 2011-12 | 8,240,000 | 5.53 – 8.27 | 07/01/11 | 06/30/12 | (14,804) | — |
| FY 2012-13 | 6,387,500 | 5.96 – 8.31 | 07/01/12 | 06/30/13 | (10,458) | — |
| FY 2013-14 | 5,027,000 | 6.37 – 8.31 | 07/01/13 | 06/30/14 | (7,844) | — |
| FY 2014-15 | 5,384,500 | 6.37 – 9.38 | 07/01/14 | 06/30/15 | (8,152) | — |
| FY 2015-16 | 4,488,000 | 6.42 – 9.85 | 07/01/15 | 06/30/16 | (6,138) | — |
| FY 2016-17 | 3,197,500 | 6.61 – 9.83 | 07/01/16 | 06/30/17 | (3,415) | — |
| FY 2017-18 | 2,190,000 | 6.76 – 7.14 | 07/01/17 | 06/30/18 | (648) | — |
| Total | 49,842,500 | 5.07 – 9.85 | 07/01/10 | 06/30/18 | $ (84,268) | — |

* Contract quantities in MMBtu – Million British Thermal Units.

As of June 30, 2009, the Power System's financial natural gas hedges by fiscal year were the following (amounts in thousands):

| Derivative description | Notional amount (Total contract quantities*) | Contract price range dollar per unit | First effective date | Last termination date | Fair value | Cash paid at derivative inception |
|---|---|---|---|---|---|---|
| Financial natural gas: | | | | | | |
| FY 2009-10 | 47,199,500 | 2.56 – 7.61 | 07/01/09 | 06/30/10 | $ (77,823) | — |
| FY 2010-11 | 14,928,000 | 5.07 – 7.70 | 07/01/10 | 06/30/11 | (15,696) | — |
| FY 2011-12 | 8,240,000 | 5.53 – 8.27 | 07/01/11 | 06/30/12 | (6,149) | — |
| FY 2012-13 | 6,387,500 | 5.96 – 8.31 | 07/01/12 | 06/30/13 | (3,782) | — |
| FY 2013-14 | 5,027,000 | 6.37 – 8.31 | 07/01/13 | 06/30/14 | (3,090) | — |
| FY 2014-15 | 5,384,500 | 6.37 – 9.38 | 07/01/14 | 06/30/15 | (2,941) | — |
| FY 2015-16 | 4,488,000 | 6.42 – 9.85 | 07/01/15 | 06/30/16 | (1,905) | — |
| FY 2016-17 | 3,197,500 | 6.61 – 9.83 | 07/01/16 | 06/30/17 | (1,278) | — |
| FY 2017-18 | 2,190,000 | 6.76 – 7.15 | 07/01/17 | 06/30/18 | 78 | — |
| Total | 97,042,000 | 2.56 – 9.85 | 07/01/09 | 06/30/18 | $ (112,586) | — |

* Contract quantities in MMBtu – Million British Thermal Units.

The fair value of the natural gas hedges increased by $28.3 million and is reported as a deferred outflow on the statement of net assets. All fair values were estimated using forward market prices available from broker quotes and exchanges.

***(b) Credit Risk***

The Power System is exposed to credit risk related to nonperformance by its wholesale counterparties under the terms of contractual agreements. In order to limit the risk of counterparty default, the Department has implemented a Wholesale Marketing Counterparty Evaluation Policy, which was amended and renamed as Counterparty Evaluation Credit Policy (the Counterparty Policy), and was approved by the Board on May 6, 2008. Under the new policy, the scope has been expanded beyond physical power to include transmission, physical natural gas, and financial natural gas. Also, the credit limit structure has been categorized into short-term and long-term structures where the short-term structure is applicable to transactions with terms of up to 18 months and the long-term structure to cover transactions beyond 18 months.

The Policy includes provisions to limit risk including: the assignment of internal credit ratings to all Department's counterparties based on counterparty and/or debt ratings; the use of expected default frequency equivalent credit rating for short-term transactions; the requirement for credit enhancements (including advance payments, irrevocable letters of credit, escrow trust accounts, and parent company guarantees) for counterparties that do not meet an acceptable level of risk; and the use of standardized agreements, which allow for the netting of positive and negative exposures associated with a single counterparty.

As of June 30, 2010, the 11 financial natural gas hedge counterparties were rated by Moody's as follows: one at Aaa, one at Aa1, one at Aa2, two at Aa3, three at A1, and three at A2. The counterparties were rated by S&P as follows: three at AA-, two at A+, and five at A, and one at NR. As of June 30, 2009, the 11 financial natural gas hedge counterparties were rated by Moody's as follows: one at Aaa, two at Aa1, one at Aa2, two at Aa3, three at A1, and two at A2. The counterparties were rated by S&P as follows: two at AA, three at AA-, two at A+, and four at A.

Based on the International Swap Dealers Association agreements, the Department or the counterparty may be required to post collateral to support the financial natural gas hedges subject to credit risk in the form of cash, negotiable debt instruments (other than interest-only and principal-only securities), or eligible letters of credit. Collateral posted is held by a custodian. As of June 30, 2010, the fair values of the financial natural gas hedges are within the credit limits and collateral posting was not required. However, as of June 30, 2009, the Department's outstanding collateral posted with counterparty is approximately $3.0 million.

***(c) Basis Risk***

The Department is exposed to basis risk between the financial natural gas hedges, which are settled monthly at NW Rocky Mountains Index, and the hedged gas deliveries, which are daily spot purchases at Kern River, Opal prices. However, these pricing points are in the same region and are highly correlated.

***(d) Termination Risk***

The Power System or its counterparties may terminate the contractual agreements if the other party fails to perform under the terms of the contract. No termination events have occurred and there are no out-of-the-ordinary termination events contained in contractual documents.

## (10) Long-Term Debt

Long-term debt outstanding as of June 30, 2010 and 2009 consists of revenue bonds and refunding revenue bonds due serially in varying annual amounts as follows (amounts in thousands):

| Bond issues | Date of issue | Effective-interest rate | Fiscal year of last scheduled maturity | Principal outstanding 2010 | Principal outstanding 2009 |
|---|---|---|---|---|---|
| Issue of 2001, Series A1 | 03/20/01 | 4.931% | 2025 | $ 771,280 | 813,055 |
| Issue of 2001, Series A2 | 11/06/01 | 5.109 | 2022 | 62,840 | 109,095 |
| Issue of 2001, Series B | 06/05/01 | Variable | 2035 | 580,800 | 580,800 |
| Issue of 2001, Series C1 | 11/15/01 | 4.788 | 2017 | 3,003 | 3,040 |
| Issue of 2002, Series A | 08/22/02 | Variable | 2036 | 388,500 | 388,500 |
| Issue of 2002, Series C2 | 11/22/02 | 4.375 | 2018 | 8,399 | 8,688 |
| Issue of 2003, Series A1 | 07/31/03 | 3.409 | 2017 | 266,435 | 307,655 |
| Issue of 2003, Series A2 | 08/19/03 | 4.662 | 2032 | 515,830 | 515,830 |
| Issue of 2003, Series B | 08/28/03 | 5.013 | 2036 | 192,860 | 196,495 |
| Issue of 2004, Series C3 | 04/07/04 | 4.298 | 2020 | 7,540 | 9,905 |
| Issue of 2005, Series A1 | 12/28/05 | 4.700 | 2041 | 561,895 | 601,895 |
| Issue of 2005, Series A2 | 12/28/05 | 4.700 | 2031 | 315,195 | 315,195 |
| Issue of 2006, Series C4 | 03/01/06 | 4.040 | 2017 | 6,465 | 7,973 |
| Issue of 2007, Series A1 | 10/18/07 | 4.659 | 2040 | 335,630 | 337,630 |
| Issue of 2007, Series A2 | 10/18/07 | 4.638 | 2033 | 191,125 | 191,125 |
| Issue of 2008, Series A1 | 11/25/08 | 5.583 | 2039 | 200,000 | 200,000 |
| Issue of 2008, Series A1 | 11/25/08 | 5.039 | 2033 | 350,000 | 350,000 |
| Issue of 2009, Series A | 02/19/09 | 4.773 | 2040 | 123,120 | 123,120 |
| Issue of 2009, Series B | 06/02/09 | 4.563 | 2025 | 172,125 | 172,125 |
| Issue of 2010, Series A | 06/02/10 | 3.898 | 2041 | 616,000 | — |
| Issue of 2010, Series B | 06/02/10 | 3.015 | 2023 | 52,130 | — |
| Total principal amount | | | | 5,721,172 | 5,232,126 |
| Revenue certificates | | | | 200,000 | 200,000 |
| Unamortized premiums, discounts, and debt-related costs (including net loss on refundings), net | | | | 30,272 | 27,609 |
| Debt due within one year (including current portion of variable rate debt) | | | | (240,235) | (217,882) |
| | | | | $ 5,711,209 | 5,241,853 |

Revenue bonds generally are callable 10 years after issuance. The Department has agreed to certain covenants with respect to bonded indebtedness. Significant covenants include the requirement that the Power Systems' net income, as defined, will be sufficient to pay certain amounts of future annual bond

interest and of future annual aggregate bond interest and principal maturities. Revenue bonds and refunding bonds are collateralized by the future revenues of the Power System.

### *(a) Long-Term Debt Activity*

The Power System had the following activity in long-term debt for the fiscal years ended June 30, 2010 and 2009 (amounts in thousands):

| | Balance, July 1, 2009 | Additions | Reductions | Balance, June 30, 2010 | Current portion |
|---|---|---|---|---|---|
| Long-term debt: | | | | | |
| Bonds | $ 5,259,735 | 672,673 | (180,964) | 5,751,444 | 220,235 |
| Revenue certificates | 200,000 | — | — | 200,000 | 20,000 |
| Total | $ 5,459,735 | 672,673 | (180,964) | 5,951,444 | 240,235 |

| | Balance, July 1, 2008 | Additions | Reductions | Balance, June 30, 2009 | Current portion |
|---|---|---|---|---|---|
| Long-term debt: | | | | | |
| Bonds | $ 4,777,183 | 850,459 | (367,907) | 5,259,735 | 197,882 |
| Revenue certificates | 200,000 | — | — | 200,000 | 20,000 |
| Total | $ 4,977,183 | 850,459 | (367,907) | 5,459,735 | 217,882 |

### *(b) New Issuances*

**Fiscal Year 2010**

In June 2010, the Power System issued $616 million of Power System Revenue Bonds, 2010 Series A. The net proceeds of $612 million (net of underwriter's discount of $3.95 million) from the 2010 Series A transaction were deposited into the construction fund to be used for capital improvements.

Power 2010, Series A Bonds, designated as "Build America Bonds" under the American Recovery and Reinvestment Act of 2009 has an average life of 28.61 years and an average coupon rate of 5.944%. The reported 3.898% effective interest rate is net of the underwriter's discount and the cash subsidy payments to be received by the Department directly from the United States Treasury equal to 35% of the interest payable on the bonds.

Also, in June 2010, the Power System issued $52.13 million of Power System Revenue Bonds, 2010 Series B. The net proceeds of $56.43 million, net of $4.3 million issue premium, costs of issuance and underwriter's discount, were used to refund certain outstanding Power System Revenue Bonds from 2001 Series A, Subseries A-1, and Subseries A-2. The transaction resulted in a $5 million net present value savings and a net loss for accounting purposes of $3.6 million, which was deferred and is being amortized over the life on the new bonds.

**Fiscal Year 2009**

In November 2008, the Power System issued $550 million of Power System Revenue Bonds, 2008 Series A. The net proceeds of $540 million from the transaction, which included a net issue discount and underwriters' discount of $10 million, were deposited into the construction fund to be used for capital improvements.

In February 2009, the Power System issued $123.12 million of Power System Revenue Bonds, 2009 Series A. The net proceeds of $125 million from the transaction, net of $1.9 million issue premium and underwriters' discount, were used to redeem the $125 million Power System Variable Rate Revenue Bonds, 2007 Series B. This transaction resulted in a $157.6 million net present value savings and a net loss for accounting purposes of $953 thousand, which was deferred and is being amortized over the life of the new bonds.

In June 2009, the Power System issued $172.125 million of Power System Revenue Bonds, 2009 Series B. The net proceeds of $181 million from the transaction, net of $8.7 million issue premium and underwriters' discount, were used to refund the Power System Revenue Bonds, 2001 Series A, Subseries A-1 maturing on July 1, 2024. This transaction resulted in a $7.28 million net present value savings and a net loss for accounting purposes of $3.2 million, which was deferred and is being amortized over the life of the new bonds.

***(c) Outstanding Debt Defeased***

The Power System defeased certain revenue bonds in prior years by placing cash or the proceeds of new revenue bonds in irrevocable trusts to provide for all future debt service payments on the old bonds. Accordingly, the trust account assets and the liability for the defeased bonds are not included in the Power System's financial statements.

At June 30, 2010, the following revenue bonds outstanding are considered defeased (amounts in thousands):

| Bond issues | | Principal outstanding |
|---|---|---|
| Second issue of 1993 | $ | 8,070 |
| Refunding issue of 1994 | | 26,980 |
| Issue of 1994 | | 5,410 |
| | $ | 40,460 |

***(d) Variable Rate Bonds***

As of June 30, 2010 and 2009, the Power System had $969.3 million in variable rate bonds.

The variable rate bonds currently bear interest at weekly and daily rates ranging from 0.14% to 0.29% as of June 30, 2010 and 0.27% to 0.30% as of June 30, 2009. The Power System can elect to change the interest rate period of the bonds with certain limitations. The bondholders have the right

to tender the bonds to the tender agent on any business day with seven days' prior notice. The Power System has entered into standby and line of credit agreements with a syndicate of commercial banks in an initial amount of $580.8 million and $388.5 million to provide liquidity for the variable rate bonds. The extended standby agreements expire in January 2012 for $580.8 million and in June 2011 for the $388.5 million.

The bonds that would be issued under the agreements will bear interest that is payable quarterly at the greater of (a) the Prime Rate plus 1.50%, (b) Federal Funds Rate plus 2.50%, and (c) 8.50%. The unpaid principal of bonds purchased is payable in 10 equal semiannual installments, commencing after the termination of the agreement. At its discretion, the Power System has the ability to convert the outstanding bonds to fixed rate obligations, which cannot be tendered by the bondholders.

The variable rate bonds have been classified as long term on the balance sheets as the liquidity facilities give the Power System the ability to refinance on a long-term basis and the Power System intends to either renew the facility or exercise its right to tender the debt as a long-term financing. The portion that would be due in the next fiscal year in the event that the outstanding variable rate bonds were tendered and purchased by the commercial banks under the standby agreements has been included in the current portion of long-term debt and was $96.9 million at both June 30, 2010 and 2009.

***(e) Revenue Certificates***

As of June 30, 2010 and 2009, the Power System has outstanding $200 million of commercial paper bearing interest at an average rate of 0.55%. The commercial paper matures not more than 270 days from the date of issuance.

The Department entered into a letter of credit and reimbursement agreement (the Agreement) with a commercial bank in the amount of $200 million to provide liquidity and credit support for the Department's commercial paper program. The agreement secures the payment when due of the principal and interest on commercial paper issued on or after August 27, 2010. Drawings on the agreement will represent advances to the Department and will bear interest that is payable monthly at the highest of (i) the Prime Rate plus 1.00%, (ii) Federal Funds Rate plus 2.00%, (iii) the Daily One-Month LIBOR plus 3.00%, and (iv) 7.00%. The unpaid principal of each advance is payable in ten equal semiannual installments, commencing on the date six months after the advance. The Agreement terminates on August 26, 2013.

The revenue certificates have been classified as long-term debt on the balance sheets as the Agreement gives the Power System the ability to refinance on a long-term basis and the Power System intends to either renew the Agreement or exercise its option to draw on the Agreement. The portion that would be due in the next fiscal year in the event that the outstanding revenue certificates were advanced by the commercial bank under the Agreement has been included in the current portion of long-term debt and was $20 million at both June 30, 2010 and 2009.

### *(f) Scheduled Principal Maturities and Interest*

Scheduled annual principal maturities and interest are as follows (amounts in thousands):

| | Principal | Interest and amortization |
|---|---|---|
| Fiscal year(s) ending June 30: | | |
| 2011 | $ 123,305 | 275,615 |
| 2012 | 136,060 | 266,242 |
| 2013 | 143,316 | 259,409 |
| 2014 | 147,005 | 252,186 |
| 2015 | 158,998 | 244,521 |
| 2016 – 2020 | 725,107 | 1,113,315 |
| 2021 – 2025 | 882,561 | 908,370 |
| 2026 – 2030 | 1,014,000 | 691,379 |
| 2031 – 2035 | 1,190,040 | 456,481 |
| 2036 – 2040 | 977,815 | 211,974 |
| 2041 – 2045 | 222,965 | — |
| Total requirements | $ 5,721,172 | 4,679,492 |

The maturity schedule presented above reflects the scheduled debt service requirements for all of the Power System's long-term debt. The schedule is presented assuming that the tender options on the variable rate bonds, as discussed on the previous page, will not be exercised and that the full amount of the revenue certificates will be renewed. Should the bondholders exercise the tender options and the Power System convert all of the revenue certificates under the line of credit, the Power System would be required to redeem the $1,169.3 million in variable rate bonds outstanding over the next six years, as follows: $116.93 million in fiscal year 2011, $233.86 million in each of the fiscal years 2012 through 2015, and $116.93 million in fiscal year 2016. Accordingly, the balance sheets recognize the possibility of the exercise of the tender options and reflect the $116.93 million that could be due in fiscal year 2011 as a current portion of long-term debt payable. Interest and amortization include interest requirements for variable rate bonds, using the variable debt interest rate in effect at June 30, 2010 of 0.24%.

## (11) Retirement, Disability, and Death Benefit Insurance Plan

The Department has a funded contributory retirement, disability, and death benefit insurance plan covering substantially all of its employees. The Water and Power Employees' Retirement, Disability, and Death Benefit Insurance Plan (the Plan) operates as a single-employer defined benefit plan to provide pension benefits to eligible department employees and to provide disability and death benefits from the respective insurance funds. Plan benefits are generally based on years of service, age at retirement, and the employee's highest 12 consecutive months of salary before retirement. Active participants who joined the Plan on or after June 1, 1984 are required to contribute 6% of their annual covered payroll. Participants who joined the Plan prior to June 1, 1984 contribute an amount based upon an entry-age percentage rate. The Department contributes $1.10 for each $1.00 contributed by participants plus an actuarially determined

(Continued)

annual required contribution (ARC) as determined by the Plan's independent actuary. The required contributions are allocated between the Power System and the Water System based on the current year labor costs.

The Retirement Board of Administration (the Retirement Board) is the administrator of the Plan. The Plan is subject to provisions of the Charter of the City of Los Angeles and the regulations and instructions of the Board. The Plan is an independent pension trust fund of the City.

Plan amendments must be approved by both the Retirement Board and the Board. The Plan issues separately available financial statements on an annual basis. Such financial statements can be obtained from the Department of Water and Power Retirement Office, 111 N. Hope Street, Room 357, Los Angeles, CA 90012.

The annual pension cost (APC) and net pension asset for the Department's Plan consist of the following (amounts in thousands):

| | Year ended June 30 | |
|---|---|---|
| | **2010** | **2009** |
| Annual required contribution | $ 210,341 | 143,698 |
| Interest on net pension asset | (11,113) | (11,175) |
| Adjustment to annual required contribution | 16,559 | 16,652 |
| APC (including $68.0 million and $44.3 million of amounts capitalized in fiscal years 2010 and 2009, respectively) | 215,787 | 149,175 |
| Department contributions | (201,002) | (144,916) |
| Change in net pension asset | 14,785 | 4,259 |
| Net pension asset at beginning of year | (119,051) | (123,310) |
| Net pension asset at end of year | $ (104,266) | (119,051) |

(Continued)

The Power System's allocated share of the Plan's APC and net pension asset consists of the following (amounts in thousands):

| | Year ended June 30 | |
|---|---|---|
| | **2010** | **2009** |
| Annual required contribution | $ 143,032 | 97,714 |
| Interest on net pension asset | (7,557) | (7,599) |
| Adjustment to annual required contribution | 11,260 | 11,324 |
| APC (including $40.6 million and $26.6 million of amounts capitalized in fiscal years 2010 and 2009, respectively) | 146,735 | 101,439 |
| Power System contributions | (129,421) | (94,604) |
| Change in net pension asset | 17,314 | 6,835 |
| Net pension asset at beginning of year | (70,644) | (77,479) |
| Net pension asset at end of year | $ (53,330) | (70,644) |

ARCs are determined through actuarial valuations using the entry-age normal actuarial cost method. The actuarial value of assets in excess of the Department's Actuarial Accrued Liability (AAL) is being amortized by level contribution offsets over rolling 15-year periods effective July 1, 2000.

In accordance with actuarial valuations, the Department's required contribution rates are as follows:

| **Fiscal year** | **Normal cost** | **Deficit amortization** | **Contribution rate** |
|---|---|---|---|
| 2010 | 12.94% | $ 12.18 | 26.12% |
| 2009 | 12.68 | 6.82 | 20.28 |

The significant actuarial assumptions include an investment rate of return of 8.00%, projected inflation adjusted salary increases of 4.25%, and cost-of-living increases of 3.00%. The actuarial value of assets is determined using techniques that smoothen the effects of short-term volatility in the market value of investments over a five-year period. Plan assets consist primarily of corporate and government bonds, common stocks, mortgage-backed securities, and short-term investments.

(Continued)

Trend information for fiscal years 2010, 2009, and 2008 for the Power System is as follows (amounts in thousands):

| Year ended June 30 | NPO asset | Percentage of APC contributed | APC |
|---|---|---|---|
| 2010 | $ (53,330) | 88% | $ 146,735 |
| 2009 | (70,644) | 93 | 101,439 |
| 2008 | (77,479) | 93 | 101,930 |

***(a) Disability and Death Benefits***

The Power System's allocated share of disability and death benefit plan costs and administrative expenses totaled $17 million and $18 million for fiscal years 2010 and 2009, respectively.

***(b) Funded Status and Funding Progress***

As of July 1, 2009, the Department's actuarial value of assets was $7.2 billion and AAL for benefits was $8.1 billion, resulting in an Unfunded Actuarial Accrued Liability (UAAL) of $808.3 million. The covered payroll (annual payroll of active employees covered by the Plan) was $805.1 million, and the ratio of the UAAL to the covered payroll was 100.4%.

As of July 1, 2008, the Department's actuarial value of assets was $7.2 billion and AAL for benefits was $7.6 billion, resulting in a UAAL of $371.2 million. The covered payroll (annual payroll of active employees covered by the Plan) was $708.7 million, and the ratio of the UAAL to the covered payroll was 52%.

Actuarial valuations of an ongoing plan involve estimates of the value of reported amounts and assumptions about the probability of occurrence of events far into the future. Examples include assumptions about future employment, mortality, and the salary increases. Amounts determined regarding the funded status of the Plan and the ARCs of the Department are subject to continual revision as actual results are compared with past expectations and new estimates are made for the future. The schedule of funding progress, presented as required supplementary information, presents information about whether the actuarial value of plan assets is increasing or decreasing over time relative to the AAL for benefits.

***(c) Current Status of Plan***

The July 1, 2010 actuarial study for the Plan noted the market value of the Plan's assets were approximately $6.266 billion and the UAAL was approximately $1.649 billion. The Plan had unrecognized investment losses of $1.041 billion as of June 30, 2010. The Plan employs a five-year smoothing technique to value assets in order to reduce the volatility in contribution rates. The impact of this will result in "smoothed" assets that are lower or higher than the market value of the assets depending upon whether the remaining amount to be smoothed is either a net gain or a net loss. If the

(Continued)

unrecognized investments losses were recognized immediately, required contributions to the Plan would increase from approximately 38.45% of covered payroll to 51.93% of covered payroll. Additionally, if the unrecognized investments losses were recognized immediately in the actuarial value of assets, the funded ratio of the Plan would decrease from 81% to 70%.

## (12) Other Postemployment Benefit (Healthcare) Plan

### *(a) Plan Description*

The Department provides certain other postemployment benefits (OPEB) to active and retired employees and their dependents. The healthcare plan is administered by the Department. The Retirement Board and the Board have the authority to approve provisions and obligations. Eligibility for benefits for retired employees is dependent on a combination of age and service of the participants pursuant to a predetermined formula. Any changes to these provisions must be approved by the Retirement Board and the Board. The total number of active and retired Department participants entitled to receive benefits was approximately 16,701 and 16,170 for the fiscal years ended June 30, 2010 and 2009, respectively.

The health plan is a single-employer defined benefit plan. During fiscal year 2007, the Retiree Health Benefits Fund (the Fund) was created to fund the postemployment benefits of the Department. The Fund is administered as a trust and has its own financial statements. Such financial statements can be obtained from the Department of Water and Power Retirement Office, 111 N. Hope Street, Room 357, Los Angeles, CA 90012.

### *(b) Funding Policy*

The Department pays a monthly maximum subsidy of $1,195 for medical and dental premiums depending on the employee's work location and benefits earned. Participants choosing plans with a cost in excess of the subsidy they are entitled to are required to pay the difference.

Although no formal funding policy has been established for the future benefits to be provided under this plan, the Department has made significant contributions into the Fund. In fiscal year 2010, the Department transferred $100 million into the Fund and paid an additional $60.5 million in retiree medical premiums. In fiscal year 2009, the Department transferred $100 million in cash into the Fund and paid an additional $59.5 million in retiree medical premiums. The Power System's portion of these amounts was $109.1 million and $108.5 million for 2010 and 2009, respectively.

### *(c) Annual OPEB Cost and Net OPEB Obligation*

The annual OPEB cost (expense) is calculated based on the employer ARC, an amount actuarially determined in accordance with the parameters of GASB Statement No. 45 *Accounting and Financial Reporting by Employers for Postemployment Benefits Other Than Pensions*. The ARC represents a level of funding that, if paid on an ongoing basis, is projected to cover normal cost under each year and amortize any unfunded actuarial liabilities (or funding excess) over a period not to exceed 30 years.

The following table shows the components of the Department's annual OPEB cost for the year, the amount actually contributed to the Plan, and changes in the net OPEB asset (amounts in thousands):

| | Year ended June 30 | |
|---|---|---|
| | **2010** | **2009** |
| Annual required contribution | $ 58,503 | 60,976 |
| Interest on net OPEB asset | (54,996) | (46,027) |
| Adjustment to annual required contribution | 42,893 | 35,089 |
| Annual OPEB costs | 46,400 | 50,038 |
| Contributions made | (160,460) | (159,522) |
| Change in net OPEB asset | (114,060) | (109,484) |
| Net OPEB asset – beginning of year | (665,698) | (556,214) |
| Net OPEB asset – end of year | $ (779,758) | (665,698) |

The following table shows the components of the Power System's share in annual OPEB cost for the year, the amount actually contributed to the Plan, and changes in the net OPEB asset (amounts in thousands):

| | Year ended June 30 | |
|---|---|---|
| | **2010** | **2009** |
| Annual required contribution | $ 39,782 | 41,464 |
| Interest on net OPEB asset | (37,397) | (31,299) |
| Adjustment to annual required contribution | 29,167 | 23,861 |
| Annual OPEB costs | 31,552 | 34,026 |
| Contributions made | (109,063) | (108,525) |
| Change in net OPEB asset | (77,511) | (74,499) |
| Net OPEB asset – beginning of year | (455,961) | (381,462) |
| Net OPEB asset – end of year | $ (533,472) | (455,961) |

The Department's annual OPEB cost, the percentage of ARC contributed to the Plan, and the net postemployment asset for fiscal years 2010, 2009, and 2008 were as follows (amounts in thousands):

| | **2010** | **2009** | **2008** |
|---|---|---|---|
| Annual OPEB cost | $ 46,400 | 50,038 | 31,077 |
| Percentage of the ARC contributed | 346% | 319% | 504% |
| Net postemployment asset | $ 779,758 | 665,698 | 556,214 |

(Continued)

The Power System's share in the annual OPEB cost, the percentage of ARC contributed to the Plan, and the net retirement asset for fiscal years 2010, 2009, and 2008 were as follows (amounts in thousands):

| | | 2010 | 2009 | 2008 |
|---|---|---|---|---|
| Annual OPEB cost | $ | 31,552 | 34,026 | 21,132 |
| Percentage of the ARC contributed | | 346% | 319% | 504% |
| Net postemployment asset | $ | 533,472 | 455,961 | 381,462 |

### *(d) Funded Status and Funding Progress*

As of July 1, 2009, the Department's actuarial value of assets was $850 million, and AAL for benefits was $1.4 billion, resulting in a UAAL of $541 million. The covered payroll (annual payroll of active employees covered by the Plan) was $805.1 million, and the ratio of the UAAL to the covered payroll was 67%.

As of July 1, 2008, the Department's actuarial value of assets was $719.6 million, and AAL for benefits was $1.4 billion, resulting in a UAAL of $638 million. The covered payroll (annual payroll of active employees covered by the Plan) was $708.7 million, and the ratio of the UAAL to the covered payroll was 90%.

Actuarial valuations of an ongoing plan involve estimates of the value of reported amounts and assumptions about the probability of occurrence of events far into the future. Examples include assumptions about future employment, mortality, and the healthcare cost trend. Amounts determined regarding the funded status of the Plan and ARCs of the Department are subject to continual revision as actual results are compared with past expectations and new estimates are made for the future. The schedule of funding progress, presented as required supplementary information, presents information about whether the actuarial value of plan assets is increasing or decreasing over time relative to the AAL for benefits.

### *(e) Actuarial Methods and Assumptions*

Projections of benefits for financial reporting purposes are based on the substantive plan (the plan understood by the Department and the plan members) and include the types of benefits provided at the time of each valuation and the historical pattern of sharing of benefit costs between the Department and the plan members to that point. The actuarial methods and assumptions used include techniques that are designed to reduce the effects of short-term volatility in AAL and the actuarial value of assets, consistent with the long-term perspective of the calculations.

In the July 1, 2009 actuarial valuation, the entry-age normal cost method was used. The actuarial assumptions include 8.00% discount rate, which represents the expected long-term return on plan assets, an annual healthcare cost trend rate of 9.00% initially, reduced by decrements to an ultimate rate of 5.00% after 8 years. Both rates include a 3.75% inflation assumption. The actuarial value of assets was determined using techniques that spread UAAL being amortized as a level percentage of projected payroll over a 26-year period.

In the July 1, 2008 actuarial valuation, the entry-age normal cost method was used. The actuarial assumptions include 8.00% discount rate, which represents the expected long-term return on plan assets, an annual healthcare cost trend rate of 9.00% initially, reduced by decrements to an ultimate rate of 5.00% after 8 years. Both rates include a 3.75% inflation assumption. The actuarial value of assets was determined using techniques that spread UAAL being amortized as a level percentage of projected payroll over a 27-year period.

## (13) Other Long-Term Liabilities

### *(a) Other Long-Term Liabilities*

The Power System has the following other long-term liabilities:

| | Balance, July 1, 2009 | Additions | Reductions | Balance, June 30, 2010 |
|---|---|---|---|---|
| Accrued liabilities | $ 23,760 | — | (11,720) | 12,040 |
| Deferred credits: | | | | |
| Purchased power | $ 331,842 | — | (97,273) | 234,569 |
| Public benefits | 82,582 | — | (82,582) | — |
| Rate stabilization | 72,830 | 2,170 | — | 75,000 |
| Other | 1,567 | 656 | — | 2,223 |
| | $ 488,821 | 2,826 | (179,855) | 311,792 |
| Accrued workers' compensation claims | $ 29,128 | 11,564 | — | 40,692 |
| Derivative instrument liabilities | $ 112,586 | — | (28,318) | 84,268 |

| | Balance, July 1, 2008 | Additions | Reductions | Balance, June 30, 2009 |
|---|---|---|---|---|
| Accrued liabilities | $ 31,340 | — | (7,580) | 23,760 |
| Deferred credits: | | | | |
| Purchased power | $ 382,654 | — | (50,812) | 331,842 |
| Public benefits | 69,633 | 12,949 | — | 82,582 |
| Rate stabilization | 48,128 | 24,702 | — | 72,830 |
| Other | 3,021 | — | (1,454) | 1,567 |
| | $ 503,436 | 37,651 | (52,266) | 488,821 |
| Accrued workers' compensation claims | $ 32,089 | — | (2,961) | 29,128 |

No portion of these liabilities is automatically due within one year.

### *(b) Deferred Credits*

The Department has deferred credits that are related to revenues collected from customers, but have not been fully earned. These funds are deferred and recognized as costs related to these deferrals are incurred.

#### Purchased Power Deferrals

During fiscal year 2006, the Board approved the suspension of deferring precollected purchased power costs and the reversal of the precollected purchased power costs recorded in prior years. The amount reversed is the cost of energy from IPP less the amount designated in rates for out-of-market purchased power costs. The reversal of the deferred credit is credited to retail sales. During fiscal years 2010 and 2009, the Power System reversed $97.3 million and $50.8 million, respectively, related to precollected purchase power costs. At June 30, 2010 and 2009, $234.6 million and $331.8 million, respectively, remain as part of deferred credits related to precollected purchased power costs.

#### Public Benefits

In accordance with Assembly Bill 1890, as amended by Assembly Bill 995 and pursuant to direction from the Board, a percentage of the Department's retail revenue is designated for use for qualifying public benefit programs. Qualifying programs include cost-effective demand side management services to promote energy efficiency and energy conservation, new investment in renewable energy resources and technologies, development and demonstration programs to advance science and technology, and services provided for low-income electricity customers. In accordance with current legislation and the Department's plans, the program is currently expected to cease on January 1, 2012.

As of June 30, 2010, the Department no longer defers public benefits revenue from customers in excess of costs incurred under qualifying programs and defers qualifying expenses in excess of collections. During fiscal years 2010 and 2009, the Department spent $102.5 million and $119.1 million, respectively, on qualified public benefits programs. These programs include energy efficiency programs, tree programs, investments in electric buses and vehicles, photovoltaics or solar power and other alternative energy sources, and support for low-income and life support customers. Regulatory liabilities are reduced when adequate public benefit expenses are incurred, and regulatory assets are recovered when the corresponding revenue is earned.

#### Rate Stabilization Account

In April 2008, the City Council approved an amendment to the electric rate ordinance, which required the balance of the Rate Stabilization Account to be maintained separately from the Energy Cost Adjustment Account. The ordinance also directed that the deferred amount within the Energy Cost Adjustment Account be the beginning balance of the Rate Stabilization Account. During fiscal year 2010, $2.2 million was deferred from current year sales for resale. As of June 30, 2010 and 2009, the balance in the Rate Stabilization Fund was $75.0 million and $72.8 million, respectively.

### *(c) Accrued Workers' Compensation Claims*

Liabilities for unpaid workers' compensation claims are recorded at their present value when they are probable of occurrence and the amount can be reasonably estimated. The liability is actuarially determined, based on an estimate of the present value of the claims outstanding and an amount for claim events incurred but not reported based upon the Department's loss experience, less the amount of claims and settlements paid to date. The discount rate used to calculate this liability at its present value was 4% at June 30, 2010 and 2009. The Department has third-party insurance coverage for workers' compensation claims in excess of $1 million.

Overall indicated reserves for workers' compensation claims, for both the Water System and the Power System, undiscounted, have increased from $53 million as of June 30, 2009 to $69.7 million as of June 30, 2010. This increase is mainly attributable to an increase in number of open cases filed at the Department. The decrease in the June 30, 2009 liability was due to a downward trend in the number of cases filed at the Department and the utility industry. As the claims typically take longer than one year to settle and close out, the entire discounted liability is shown as long term on the balance sheets as of June 30, 2010 and 2009.

Changes in the Department's undiscounted liability since June 30, 2008 are summarized as follows (amounts in thousands):

| | | June 30 | | |
|---|---|---|---|---|
| | | **2010** | **2009** | **2008** |
| Balance at beginning of year | $ | 53,037 | 57,757 | 49,669 |
| Current year claims and changes in estimates | | 34,771 | 15,053 | 28,238 |
| Payments applied | | (18,116) | (19,773) | (20,150) |
| Balance at end of year | $ | 69,692 | 53,037 | 57,757 |

The Power System's portion of the discounted reserves as of June 30, 2010 and 2009 is $40.7 million and $29.1 million, respectively.

## (14) Commitments and Contingencies

### *(a) Transfers to the Reserve Fund of the City of Los Angeles*

Under the provisions of the City Charter, the Power System transfers funds at its discretion to the reserve fund of the City. Pursuant to covenants contained in the bond indentures, the transfers may not be in excess of the increase in fund net assets before transfers to the reserve fund of the City of the prior fiscal year. Such payments are not in lieu of taxes and are recorded as a transfer in the statements of revenues, expenses, and changes in fund net assets.

The Department authorized total transfers of $220 million and $223 million in fiscal years 2010 and 2009, respectively, from the Power System to the reserve fund of the City.

***(b) Palo Verde Nuclear Generating Station (PVNGS) Matters***

As a joint project participant in PVNGS, the Department has certain commitments with respect to nuclear spent fuel and waste disposal. Under the Nuclear Policy Act, the Department of Energy (the DOE) is to develop facilities necessary for the storage and disposal of spent fuel and to have the first such facility in operation by 1998; however, the DOE has announced that such a repository cannot be completed before 2017. Capacity in existing fuel storage pools at PVNGS was exhausted in 2003. A Dry Cask Storage Facility (also called the Independent Spent Fuel Storage Facility) was built and completed in 2003 at a total cost of $33.9 million (about $3.3 million for the Department). The facility has the capacity to store all the spent fuel generated by the plant until the end of its life in 2026. The Department accrues for current nuclear fuel storage costs as a component of fuel expense as the fuel is burned. The Department's share of spent nuclear fuel costs related to its indirect interest in PVNGS is included in purchased power expense.

Because of the DOE's inability to provide a disposal site, the PVNGS operating agent filed damages actions against the DOE to recover costs incurred by the PVNGS participants. A settlement was reached in August 2010 in the amount of $30.2 million from DOE of which $1.7 million is the Department's share of the settlement which covers costs incurred up to 2006.

The Price-Anderson Act (the Act) requires that all utilities with nuclear generating facilities share in payment for claims resulting from a nuclear incident. Participants in PVNGS currently insure potential claims and liability through commercial insurance with a $375 million limit; the remainder of the potential liability is covered by the industrywide retrospective assessment program provided under the Act. This program limits assessments to a maximum of $118 million for each licensee for each nuclear incident occurring at any nuclear reactor in the United States; payments under the program are limited to $18 million per incident, per year. Based on the Department's 5.70% direct interest and its 3.95% indirect investment interest through SCPPA, the Department would be responsible for a maximum assessment of $11 million per incident, limited to payments of $2 million per incident annually.

***(c) Environmental Matters***

Numerous environmental laws and regulations affect the Power System's facilities and operations. The Department monitors its compliance with laws and regulations and reviews its remediation obligations on an ongoing basis. The following topics highlight some of the major environmental compliance issues affecting the Power System:

**Air Quality – Nitrogen Oxide (NOx) Emissions**

The Power System's generating station facilities are subject to the Regional Clean Air Incentives Market (RECLAIM) NOx emission reduction program adopted by the South Coast Air Quality Management District (SCAQMD). In accordance with this program, SCAQMD established annual NOx allocations for NOx RECLAIM facilities based on historical emissions and type of emission sources operated. These allocations are in the form of RECLAIM trading emission credits (RTCs). Facilities that exceed their allocations may buy RTCs from other companies that have emissions

below their allocations. The Department has a program of installing emission controls and purchasing RTCs, as necessary, to meet its emission requirements.

As a result of the installation of NOx control equipment and the repowering of existing units, the Department has sufficient RTCs to meet its native load requirements for normal operations.

**Air Quality – Greenhouse Gas Emissions**

In September 2006, Governor Schwarzenegger signed into law Assembly Bill 32, the California Global Warming Solutions Act of 2006 (Nunez, Chapter 488, Statutes of 2006). The bill requires the California Air Resources Board to develop regulations and market mechanisms that will ultimately reduce California's greenhouse gas emissions to 1990 levels by 2020, or approximately 30% from business-as-usual emission levels for 2020. Mandatory declining greenhouse gas emission caps will begin in 2012 for significant sources and be gradually reduced to meet the 2020 goals. As specified in the bill, all emissions from electricity that is consumed in the state, whether it is generated in California or in other states, will be subject to the cap. As a result, the Power System's share of emissions from IPP and other facilities outside California will be subject to this program. In December 2008, the California Air Resources Board adopted a Climate Change Scoping Plan, pursuant to AB 32. The Scoping Plan recommends a number of strategies that will apply to the electricity sector, including 1) California cap-and-trade program linked to the Western Climate Initiative, 2) energy efficiency, 3) renewable energy, and 4) combined heat and power.

It is uncertain at this time what impact a state program will have on the Power System's operations. The target date for the Air Resources Board to adopt regulations for the electricity and industrial sectors is January 1, 2011. Per AB 32, the goal of the regulations would be to "achieve the maximum technologically feasible and cost-effective greenhouse gas reductions." The Department is actively participating in the rule making process.

SB 1368 was signed into law on September 29, 2006 and requires the California Public Utilities Commission (CPUC) and the California Energy Commission (CEC) to establish a greenhouse gases emissions performance standard and implement regulations for all long-term financial commitments in base load generation made by LSEs and local publicly owned electric utilities (POUs), respectively. The greenhouse gas emissions performance standard is not to exceed the rate of greenhouse gases emitted per MW hour associated with combined-cycle, gas turbine base load generation. The regulations have been adopted by the CPUC for investor-owned utilities and by the CEC for publicly owned utilities and establish an emissions performance standard of 1,100 pounds of carbon dioxide per MW hour of electricity.

At the federal level, several legislative bills have been proposed or introduced, but none have passed Congress. As such, a federal cap-and-trade program is unlikely to be established in the same time frame (2012) as a state cap-and-trade program, but may be considered in future years. However, the United States Environmental Protection Agency (EPA) adopted its Prevention of Significant Deterioration (PSD) and Title V Greenhouse Gas Tailoring Rule in June 2010. The Power System's in-basin repowering projects requiring PSD permits after January 2, 2011 would be impacted as they would be required to submit a GHG Best Available Control Technology (BACT) analysis. EPA is expected to issue its GHG BACT guidance for public review later this year. Also, the Power

System's generating stations will need to amend their Title V operating permits to incorporate any GHG requirements when the permits are renewed.

**Power Plant Once-Through Cooling Water Systems**

Once-through cooling (OTC) is the process where water is drawn from a source, pumped through equipment to provide cooling, and then discharged. Some type of cooling process is necessary for nearly every type of traditional electrical generating station, and the OTC process is utilized by many electrical generating stations located next to large bodies of water. Typically, the water used for cooling is not chemically changed in the process although its temperature is increased.

Due to the Second Circuit Court's decision to remand most of EPA's 316(b) Rule finalized in July 2004, EPA suspended this Rule and is in the process of drafting a new rule. In the absence of EPA's 316(b) Rule, the California State Water Resources Control Board (State Board) decided to move forward and is in the process of developing their own statewide OTC policy. The statewide draft policy was released in June 2009 was adopted May 4, 2010. It is expected that the adopted policy will be signed by the Office of Administrative Law (OAL) and become effective by the end of September 2010. This policy will require LADWP's coastal power plants to reduce OTC by 93% – equivalent to wet cooling towers using seawater. This is referred to as the Track 1 compliance path. If the Track 1 compliance path is found to be infeasible, with concurrence from the State Board, a Track 2 compliance path can be pursued, which requires that the cooling water intake structure (CWIS) achieve an impingement mortality and entrainment (IM/E) reduction level of 90% of the Track 1 compliance standard or 83.7% on a unit-by-unit basis. Currently, the compliance deadlines stated in the statedwide policy for LADWP facilities are: HGS: 2015; HnGS 2019; and SGS 2020. Recently, LADWP has been working with the State Board to have the currently adopted policy amended. Should the amended policy be adopted by the State Board and approved by OAL, LADWP will be submitting a compliance plan for approval by the State Board that will extend the currently stipulated compliance deadlines and require immediate implementation of interim measures. These interim measures will include the funding of a mitigation project or the use of screens or an equivalent alternative measure at each OTC unit or intake until the facility is in full compliance.

In addition, other regulatory changes have been made that could significantly impact operations at the Haynes and Harbor Generating Stations. The Regional Water Quality Control Board reclassified the body of water that the OTC water is discharged to an enclosed bay for the Harbor Generating Station, and sent a letter of intent to reclassify the receiving water body of water as an estuary for the Haynes Generating Station discharge. Even though the Haynes Generating Station will be repowering existing units, should there be a reclassification for the water body discharges at the Haynes Generating Station, there will be requirements that cannot be met with its existing cooling or future repowered configuration. The Department is in the process of reviewing the regulations and conducting studies. Once the studies are reviewed, the Department will determine an appropriate course of action.

### *(d) Litigation*

#### i. California Receivables and Refund Hearings

During fiscal year 2001, the Power System made sales to the California Power Exchange (CPX), and the California Independent Service Organization (CAISO) to facilitate the purchase and sale of energy and ancillary services in the state of California under Assembly Bill 1890. Through November 2009, these agencies, the CAISO and the CPX, made minimal payments on amounts outstanding since April 2001 to counterparties, including the Power System, for certain energy purchases in fiscal years 2000 and 2001. The CPX filed for protection under Chapter 11 of the Federal Bankruptcy Statute in January 2001. Two utilities with significant amounts due to these agencies have paid all amounts due; however, the amounts remain in an escrow account pending the resolution of disbursement of the funds.

In December 2009 this matter was settled and the Power System received $147 million on their receivable balance. The Power System had recorded a receivable of $166 million and a $50 million liability as of June 30, 2009 against the $166 million receivable for potential refunds pertaining to its wholesale sales during 2000 and 2001. Management believes that this was the most probable amount that would be refunded by the Power System and is based on the most recent formula disclosed by FERC. The difference between the amount of the settlement and the net amount of the receivable was recorded as Sales for Resale.

As of June 30, 2010 and 2009, a total of $0 and $116.3 million, respectively, was recorded due to the Power System from the CAISO and the CPX, net of potential refunds.

#### ii. Capital Facilities Fee Claims

In June 2007, the Department received a tentative decision in favor of the state and a number of local government agencies that are electric customers of the Department that claimed that the Department has rates that include a capital facilities' charge that violates the state's statute. However, in October 2008, the Department settled the case and recorded the $160 million settlement amount. Additionally, as permitted by SFAS No. 71, the Board approved to defer all potential costs associated with the resolution of this litigation and establish a corresponding long-term deferred debit to be recovered through future revenues over a period of up to 10 years, if necessary.

#### iii. Other

A number of claims and suits are also pending against the Department for alleged damages to persons and property and for other alleged liabilities arising out of its operations. In the opinion of management, any ultimate liability, which may arise from these actions, is not expected to materially impact the Power System's financial position, results of operations, or cash flows as of June 30, 2010.

(Continued)

### *(e) Risk Management*

The Power System is subject to certain business risks common to the utility industry. The majority of these risks are mitigated by external insurance coverage obtained by the Power System. For other significant business risks, however, the Power System has elected to self-insure. Management believes that exposure to loss arising out of self-insured business risks will not materially impact the Power System's financial position, results of operations, or cash flows as of June 30, 2010.

### *(f) Credit Risk*

Financial instruments, which potentially expose the Power System to concentrations of credit risk, consist primarily of retail and wholesale receivables. The Power System's retail customer base is concentrated among commercial, industrial, residential, and governmental customers located within the City. Although the Power System is directly affected by the City's economy, management does not believe significant credit risk exists at June 30, 2010, except as provided in the allowance for losses. The Power System manages its credit exposure by requiring credit enhancements from certain customers and through procedures designed to identify and monitor credit risk.

**LOS ANGELES DEPARTMENT OF WATER AND POWER**
